0. Invocation

I bow to those [[[Who? Those who know the two truths. What are they? Here's a simile:]]] who are the sunlight of knowledge and the moonlight of kindness who dwell without abiding [[[at the limits of great wisdom and surpassing compassion]]] in the sky [[[of knowledge]]]—reality devoid of proliferations [[[the ultimate]]]—of a world which is like an illusion [[[conventional]]]. [[[We speak of the center of boundless knowledge like we speak of the center of the sky.(?)]]]

[[[He praises the perfectly and completely Enlightened Ones by recollecting their virtues, and praises his lamas by recollecting their kindness.]]]

I salute the lord,¹ bodhisattva [[[Gangs pa blo gros byang chub]]]² of [[[endowed with]]] stainless [[[devoid of any defilements, consisting of ignorance and mistaken cognitions]]], discriminative intellect, who has the treasure of boundless virtues, known in the world to be like the sun, an illuminator. [[[Just as the sun is known to all as luminous, this one too is known to those who hear as knowledgeable and virtuous.]]]

¹ We take *rje btsun dag* as honorific, rather than plural, given the identification of the object of the homage.

² The annotator identifies the object of homage as Gang pa blo gros byang chub; the verse uses the latter two parts of this name, *blo gros* ("intellect") and *byang chub*, here part of "bodhisattva."

1. Statement of Purpose

The root of all faults is attachment to [things having] characteristics and hence is to be eliminated. Wishing to achieve excellences for the sake of oneself and others [[[this is the ultimate purpose]]], I will explain so that the absence of nature of all phenomena [[[this is the topic]]] will be realized [[[this is the purpose (of the treatise)]. This is indirectly the connection between them.]]]³.

2. The three characteristics within the Two Truths and the division of provisional and definitive meaning⁴

2.1 Summarized explanation

By turning three times the wheel of the dharma consisting in the twelve divisions of the Buddha's words, which are collected in the two or three baskets,⁵ (the Buddha) made clear the system of the middle, free of the extremes of deprecation and reification [[[It is free of the superimposition of existence because the duality of object and mind, or cognition, and so forth, do not exist ultimately. It is free from the extreme of non-existence because although these things do not exist, we do not call them non-existent.]]], by means of the three characteristics within the two truths.⁶ [[[This is the summarized explanation.]]]

³ Cf. Broido 1983: 5: “The *dgos-'brel* of a work is often discussed under five headings, viz. the *text (rjod-byed, abhidhāna), its *topic (brjod-bya, abhidheya), the immediate *purpose (dgos-pa, prayojana) for which it was written, the more *distant purpose (dgos-pa'i dgos-pa or nying-dgos, prayojanaprayojana), and the *connection ('brel-ba, sambandha) between them.”

⁴ Elements of this discussion might have their source in the *Madhyamakāloka* (to be investigated further).

⁵ Vetturini (2007 : 65) records that Lo dgon pa bSod nams lha'i dbang po (1423-1496), the author of the *bKa' gdams rin po che'i chos 'byung rnam thar nyin mor byed pa'i 'od stong* (“Myriad Rays of the Sun”), mentions three or four turnings of the Dharma Wheel, and “twelve scriptural categories or three baskets (tripiṭaka) which may be considered the Buddha's word (dvādaśāṅgabuddhavacana).” Vetturini (n. 292) lists the twelve as they are identified in the *dByangs can lha mo*, a dictionary of Buddhist terminology: 1. *mdo* (sūtra), 2. *dbyangs kyis bsnyad pa* (geya), 3. *lung bstan* (vyākaraṇa), 4. *tshigs bcad* (gāthā), 5. *ched brjod* (udāna), 6. *gleng gzhi* (nidāna), 7. *rtogs brjod* (avadāna), 8. *de lta bu byung ba* (itivṛttaka), 9. *skyes rab* (jātaka), 10. *shin tu rgyas pa* (vaipulya), 11. *rmad byung* (adbhūta) and 12. *gtan phab* (upadeśa).

⁶ The “three characteristics” (*mtshan nyid gsum*) are here the characterizations ‘dependent’ (Skt. *paratantra*), ‘imputational’ (Skt. *parikalpita*) and ‘perfected’ (Skt. *pariniṣpanna*) related to the model of the Three Natures (Skt. *trisvabhāva*) developed by Indian Buddhist idealist philosophers such as Asaṅga and Vasubandhu (both c. 4th–5th c.). See Wood 1991: 31-60 and Thakchoe 2016 (§3.1).

2.2 Extended explanation

2.2.1 The three characteristics within the two truths according to the respective philosophical systems

2.2.1.1 Hearers

[[[Hearer]]]* sectarians accept as the definitive meaning of the middle that rejects the two extremes [[Since they assert object and mind, the dependent character, they do not make the deprecation "non-existence"; insofar as these are devoid of a personal self, they do not superimpose the existence of a personal self]] the meaning of the three characteristics [[two are ultimate; the twofold imputational character⁷ is conventional]] being taught within the two truths, namely [[the sayings of the initial (turning)]] positing [[the duality of]] object and mind, which are the dependent character [[these are held to be true as entities, whereby the phenomenal self of object and subject is also asserted to be true]], [[as the object in the perspective of being]] devoid of personal self as the ultimate.

*[[We accept the following: With regard to the basket of the Hearers, Hearers are practitioners who depend on teachers; Solitary Buddhas do not depend on a guru; bodhisattvas are those who practice in such a way for the welfare of others.]]

2.2.1.2 Mādhyamikas

[[Taking into account what is said correctly,]] Mādhyamikas accept in that way (that is, as the definitive meaning of the middle that rejects the two extremes) the meaning of the three characteristics being taught within the two truths, namely [[the sayings of the intermediate (turning)]] explaining the emptiness of all characters [[dependent and imputational characters are both conventional; the perfected character is ultimate truth]], such as real cause and effect, as the ultimate [[all superimpositions as true on these dependent characters that are like illusions are the imputational character. The perfected character is (the emptiness of all characters)]]].

2.2.1.3 Yogācāra

The Yogācāra accept in that way (that is, as the definitive meaning of the middle that rejects the two extremes) the meaning of the three characteristics being taught within the two truths, namely [[the sayings of the final (turning)]] positing the dependent character, mere cognition, [[Taking that as true, the imputational character superimposes onto that (mere cognition) the duality of object and subject as the phenomenal self and personal self; that (mere cognition) being]] devoid of the dualism of object and subject, and so forth, as the ultimate.

⁷ In Chap. V, v. 14, a distinction is made between two kinds of incorrect conventional corresponding to the substantialists' imputational character, namely, conceptualizations and mistaken non-conceptual (i.e., hallucination etc.).

This might also be referring to the division of the imputational character into the "authentic imputational character" (*kun brtags mtshan nyid pa*) and the "conventional imputational character" (*tha snyad tsam du yod pa'i kun brtags*). (REF)

Table 1: The three characteristics within the two truths				
Conventional Ultimate	Definitive meaning (according to the author)			
	turning of the wheel	dependent	imputational	perfected
Hearers	1st	object and mind (asserted to be true as entities)	personal self	object and mind devoid of personal self
Mādhyamikas	2nd	illusion-like cause, effect, etc.	superimposition of dependent characters as true	emptiness of all characters
Yogācāra	3rd	mere cognition	superimposition of mere cognition as dual (subject/object) and as having phenomenal self and personal self	mere cognition devoid of dualism, etc.

2.2.2 Teaching the distinction between the provisional and definitive meanings

The way things are [[[the system]]] is set forth from the perspective of disciples.

[Verse 1] While the sage spoke in manifold ways [[[cultivating the dharma as antidotes to the 84,000 afflictions]]] in accordance with disciples [[[as said in *Laṅkāvatāra Sūtra* X.406) "according to the illness"]],

It is said that the absence of character [[[the sayings of the intermediate (turning)]]] is the definitive meaning; the rest [[[the initial and final (turnings)]]] are of provisional meaning.

[2.2.2.1] Distinction in terms of establishment/invalidation by reasoning

[[[A further distinction between the definitive and provisional meanings: the nature of things that is established by reasoning is the definitive meaning; scripture that is invalidated by final reasoning is of provisional meaning.]]]

The three characteristics taught within the two truths [[[in the initial and final occasions]]] —namely [[[according to) the sectarians and Yogācāra]]] the dependent character and perfected character are posited as ultimate; the imputational character alone is said to be conventional—is a saying of provisional meaning. Indeed, according to the system of others' [[[people]]] thinking, even the ultimate itself [[[which is taught (in that system) but is not true in that way]]] [[[when Mādhyamikas correctly explain, the dependent character they assert]]] is just false conventional.

Both the imputational character—cause and effect [[[being true]]] as ultimate and so forth—and the dependent character—illusion[[[-like cause and effect, which Mādhyamikas themselves accept to be true as such]]]—are posited to be conventional, and the emptiness of all characteristics ultimately is taught. This is a saying of definitive meaning because it does not invite another meaning [[[when one observes) "it is not true as such"]]] and [[[once it is known]]] it is not to be rejected. This is because it is something [[[the dharma taught in the intermediate

(turning))]] that abides for [[[when analyzed by]]] final reasoning and what has a meaning opposite [[[to the dharma taught in the intermediate (turning)]]] is (to be rejected)⁸ [[[is invalidated by reasoning]]]. [[[This is) of provisional meaning.]]]

[2.2.2.2] The purpose of the sayings of provisional meaning

[[[Objection: The intermediate teachings alone suffice; the initial and final teachings are not necessary. Why are they taught through some intention?

(In answer) to that, there are three parts: the purpose of intentional teaching; the intentional ground; and the invalidation of what is literal.⁹]]]

[2.2.2.2.1] The purpose of intentional teaching

[[[It is taught]]] In order for those [[[the sectarians]]] whose perspective is terrified of [[[the teaching of]]] emptiness because they adhere to characters to enter the teaching gradually and in order to safeguard those [[[people]]] who would adopt a nihilistic view by taking the Buddha's words regarding the absence of all characteristics to the letter [[[they understand non-existence in every way through the teaching "from form to omniscient consciousness, [all things] are non-existent"]]]¹⁰,

[2.2.2.2.2] The intentional ground

intending the dependent nature [[[illusion-like dependent arising]]] to be existent as correct conventional,

[2.2.2.2.3] The invalidation of what is literal

[[[The valid cognition that invalidates what is literal should be added.]]]

[the Buddha] taught the initial and final wheel of the dharma [[[the general meaning of the baskets]]].

[2.2.2.3] Specific explanation of the definitive meaning

[[[The specific explanation of the definitive meaning has five parts: the meaning of the term; the division of the scriptural tradition that teaches that; establishing the

⁸ The literal reading of the text (*bzlog pa'i don can yin*) invites the understanding “and it has a meaning that is opposite,” which is does not make sense. In our translation, we solve the problem by relating “yin” to the “ma yin” in the preceding sentence. It is possible that the text is faulty and should read *bzlog pa'i don can ma yin* (“it does not have an object that is opposed”). But one should observe that the annotations try to make sense of the text as it is, by supplementing “*la rigs pas gnod pa*,” leading to the reading “what has an opposite meaning is invalidated by reasoning.”

⁹ On the trio of the “purpose” (*dgos pa*), the “intentional ground” (*dgongs gzhi*) and “invalidation of what is literal” (*dngos yin pa la gnod pa*) see Seyfort Ruegg 2010, chapters 7 (“Purport, Implicature, and Presupposition: Sanskrit *abhiprāya* and Tibetan *dgongs pa/dgongs gzhi* as Hermeneutical Concepts”) and 8 (“An Indian Source for the Tibetan Hermeneutical Term *dgongs gzhi*, “Intentional Ground””). Phya pa makes frequent use of these categories when analyzing passages of Scriptures in his commentary on the *Madhyamakāloka*. Seyfort Ruegg (2010: 198, n. 12) mentions their use by bSod nams rtse mo (1142-1182), who had been a student of Phya pa. They are further discussed by Sa skya Paṇḍita (bSod nams rtse mo’s nephew) in the *mKhas ’jug* and the *sDom gsum rab dbye*.

¹⁰ Maybe a quote from the **Āryacandragarbhaprajñāpāramitāmahāyānasūtra*.

details [of the scriptural tradition]; negating attachment to entities; and the effects of cultivating emptiness.]]]

2.2.2.3.1 The meaning of the term

[[[The meaning of the term has four parts: the literal meaning of the term [[[This is the intention of the sutra]]]; presenting the genuine one (?); ?; the reason to apply [this term] to the state of affairs and the texts]]]

2.2.2.3.1.1 The literal meaning of the term

The wheel of dharma of the absence of characteristics, the precious sutra collection of definitive meaning, is a meaning that is taught directly in sutras such as the three Perfection of Wisdom, i.e. the extended one, the middle-length one, and the brief one, and a meaning that is to be understood [[[indirectly]]].

[a] The first: the essence of the path that has an object is condensed in the eight chapters [of the Perfection of Wisdom] into the five paths, the path of accumulation through the path of no more learning.¹¹ That is also explained in the instructional treatises, along with related texts. [[[This is not taught here.]]]

[b] The second [[[the essence of the object being condensed in the two truths]]] is explained by the Collection of Reasoning, along with related texts [[[by texts related to the Collection of Reasoning]]]: principally, [[[this is taught:]]] the path [[[whose essence is realizing that]]] and what it perceives [[[i.e., its object]]].

1. The state of affairs, the path and the texts are “the Middle Way”

1.a The state of affairs is “the Middle Way”

What is perceived by the path, the two truths [[[whose duality is found in reality]]], is the state of affairs called the “Middle Way” because, whether [[[the two truths are]]] taken individually or interrelatedly, they are beyond the extremes of reification and deprecation, namely permanence and annihilation and so forth.

[[[As for the conventional, in as much as one accepts that as long as causes exist, effects also exist, one does not subscribe to annihilation. With the elimination of causes, effects cease, and so one does not subscribe to permanence. For this very reason, it is free from reification and deprecation. Since the ultimate is beyond all expression, it is free from permanence and annihilation, as well as reification and deprecation. Based on both (truths), conventionally, since one accepts that effects come from causes, there is freedom from annihilation; ultimately, since one accepts that nothing is established whatsoever, there is freedom from superimpositions.]]]

1.b The path is “the Middle Way”

What takes as its object that previously described state of affairs [[[the wisdom that realizes the two truths]]] is the path that is the “Middle Way” as well, because it realizes the elimination of all extremes.

¹¹ The five paths are: tshogs lam, sbyor lam, mthong lam, sgom lam, mi slob pa'i lam (path of accumulation, of joining, of seeing, of meditation, of no more learning)

1.c The texts are “the Middle Way”

The texts [[[sūtras and treatises]]] that express those (two truths) are also the “Middle Way” because they express the elimination of all extremes [[[namely, reification and deprecation]]].

2. *The state of affairs, the path and the texts are “the Perfection of Wisdom”*

Those [[[three]]] are the “Perfection of Wisdom”: the path that is the “Perfection of Wisdom”; the state of affairs that is the “Perfection of Wisdom”; and the texts that are the “Perfection of Wisdom.”

2.2.2.3.1.2 Presenting the genuine one

2.a The path is “the Perfection of Wisdom”

As for the path, assigning the genuine wisdom within the stage of ordinary beings [[[it is the inferential cognition that examines the absence of nature]]] or assigning it within the path of seeing [[[it is the wisdom that directly beholds the ultimate]]] differ in many ways. However, master Dignāga assigns it [[[genuine wisdom]]] only to [[[buddhahood (at the end of)]]] the path of no more learning, as it is said:

The Perfection of Wisdom is non-dual; [[[the wisdom is gnosis]]] that gnosis [[[which is non-dual gnosis]]] is [[[found in]]] the Tathāgata.

Since the state of affairs, which is the result [[[genuine wisdom]]], is endowed with them [[[texts and the path]]], the path and texts [[[which are wisdom]]] are designated by the word (for) that [[[for that, which is the genuine result]]].¹²

However, in general, genuine wisdom is indeed encapsulated within the path [[[all three (presentations) agree on accepting (genuine wisdom) for the path]]].

2.2.2.3.1.3 ***

[[[How can a conventional cognition be wisdom?]]] Conventional seeing as an illusion is wisdom from the point of view of not conceiving the three spheres (of agent, action, and object), and so there is no contradiction with (the verse ending with) “It is explained for the sake of cognizing the ultimate”¹³ [[[cognizing the state of affairs is explained to be wisdom]]]. This is like the saying, “The giving that precedes giving is wisdom.”¹⁴ [[[While giving is conventional, when it is encompassed in wisdom it is perfected.]]]

2.2.2.3.1.4 The reason to apply this term to the state of affairs and the texts

2.b The state of affairs is “the Perfection of Wisdom”

As for the state of affairs [[[being the Perfection of Wisdom]]], it is because it is what is perceived by wisdom, because it is explained:

[I bow to the mother of the Jinās of the three times,
Perfection of Wisdom, who is ineffable, inconceivable, unutterable.]

¹² Dignāga, *Āryaprajñāpāramitāsaṅgrahakārikā*, verse 1.

¹³ Asaṅga, *Mahāyānasūtrālaṅkāra* XVI.15c.

¹⁴ **Āryaprajñāpāramitāsaṃcayagāthā*, Tib. ‘Phags pa shes rab kyi ph arol tu phyin pa sdud pa tshigs su bcad pa, D34-1-5a.

Unborn, unceasing, she is of the nature of space,
[And in the scope of *so so rang rig ye shes.*] ¹⁵

One expresses with the word for that [[[the perceiver]]], that which it (the perceiver) perceives, like *pratyakṣa*, etc.. [[[Like blue, the object of that (i.e., of *pratyakṣa*) is called "blue *pratyakṣa*."]]] ¹⁶

2.c The texts are “the Perfection of Wisdom”

As for the texts (being the Perfection of Wisdom), this is because they are the cause of wisdom and they express it, just as one calls the words that are the cause of inference by the name of that [[[i.e., of inference; namely they are called "inference for others"]]] ¹⁷; or again, one calls a treatise on [[[that expresses]]] epistemology "epistemology." ¹⁸

2.2.2.3.2 The division of the scriptural tradition that teaches that

i. Setting forth the opponent's position

As for delineating the meaning to be understood in the discourses (*bka'*) that are Middle Way texts:

Previous generations made a twofold convention:

- foundational Madhyamaka [[[The scriptures of Nāgārjuna, who received the prophecy of enlightenment, are foundational because they cannot be refuted.]]] and
- Madhyamaka that takes sides.

Madhyamaka that takes sides, are explained [[[by previous generations]]] to be (three) regarding the ultimate:

- Illusion-like,
- Non-Abiding, and
- Paradoxical; ¹⁹

and (three) regarding the conventional:

¹⁵ Kun dga' snying po (*Ānandagarbha), **Prajñāpāramitāmaṇḍalopāyikā*, Tib. *Shes rab kyi pha rol tu phyin pa'i dkyi 'khor gyi cho ga* D254b; Ratnakīrti, **Yogacaturdevastotra*, Tib. *sByor ba bzhi'i lha la bstod pa* D247b. Translation: Kapstein 2000: 111.

¹⁶ The word *pratyakṣa* in Sanskrit, as well as the word *mngon sum* in Tibetan, can refer either to a perception or a perceived object.

¹⁷ This reference to the metaphorical application of the term “inference” (Skt. *anumāna*) to inference-for-others (Skt. *parārthānumāna*) goes back to Dignāga (PSV ad PS 3.1ab) and Dharmakīrti (PVin 3 ad PVin 3.1ab). The term “inference” refers directly to “inference-for-oneself,” which is a mental event. An inference-for-others, on the other hand, consists in a statement meant to indicate to the opponent a triply characterized reason, and thereby enabling her to achieve an inference-for-oneself. Dignāga and Dharmakīrti describe the metaphorical application of the term as that of the effect to the cause (*kāraṇe kāryopacārāt*).

¹⁸ This metaphorical use of the term *tshad ma* speaks in favor of considering the expression *tshad ma* figuring at the beginning of the title of a number of Tibetan epistemological works as a “topic marker.” (E.g., Phya pa Chos kyi seng ge's *Tshad ma yid kyi mun sel*).

¹⁹ More literally:

1. Those who claim [that phenomena are] like illusions (*sgyu ma ltar smra ba*)
2. Those who hold [that phenomena] do not abide whatsoever (*rab du mi gnas par 'dod pa*)
3. Those who hold what is paradoxical to be ultimate (*'gal 'dus don dam par 'dod pa*)

- Yogācāra,
- Sautrāntika, and
- "Compatible with Both" or "Unspecified."²⁰

[[[The refutation of that:]]]

That is not sound because regarding Paradoxical [[[for instance, on one hand) since it perceives something as having parts it is not one and since it is not (one), it is not many; on the other hand the perception of something having parts entails being one; therefore (there is a paradox)]]] and so forth, since bad conceptions are limitless,²¹ such side-takers would be innumerable [[[since one must count also *nag po rim lu*²²]]. [[[Further, regarding the conventional]]], it is not sound because there are those [[[such as Jñānagarbha]]] whose assertions are similar to the Vaibhāṣikas, who are not included among Sautrāntikas and Yogācāras; it is impossible to assert something compatible with both Sautrāntika and Yogācāra; and if one held tenets that were compatible with both, which are incompatible (with each other), it would not be suitable for those who reason to be scholars.²³ Not making a judgement (?) but repeating both systems without taking any position oneself is not found in texts.

ii. Presenting our own position

Thus, regarding the ultimate, there are two: Illusion-like and Non-Abiding; regarding the conventional, there are two:

- Yogācāra [[[these are twofold: True Aspectualists and False Aspectualists]]] and
- Realists.²⁴

And [[[regarding Realists]]] objects are asserted in accordance with Sautrāntika or in accordance with Vaibhāṣika.

Table 2: Subdivisions of Madhyamaka		
<u>rGya dmar ba's own position</u>		
<i>According to previous authors</i>		
Foundational	That takes sides	
	Regarding the ultimate	Regarding the conventional
	i. illusion-like ii. non-abiding iii. paradoxical	i'. Yogācāra ii'. Sautrāntika iii'. 'Compatible with both' or 'Unspecified'
<i>According to rGya dmar ba</i>		
	i. illusion-like ii. <u>non-abiding</u>	i'. Yogācāra ii'. Realists

²⁰ "Not incompatible with both traditions" (*gnyi ga'i lugs dang mi 'gal ba*) or "Those who judge by apprehending in general (?)" (*spyi bzung zhal che ba*).

²¹ The phrase "bad conceptions are limitless" is also found on 29a7 after the enumeration of the main four non-Buddhist systems to be refuted.

²² This is probably the name of philosophical or religious system. It is not found in the famous list of 120 names of doctrines in Bhāviveka's *Tarkajvālā*. If referring to an Indian system, "Nag po" could refer to Kṛṣṇa. In Tibet, "Nag po" could refer to the black Mahākāla. "Rim lu" may indicate a "succession of knots."

²³ rGya dmar ba may here simply call this position unreasonable or he may provide an analogous case, in which "being reasonable" should be associated with "being learned" but here it would not be (because of still being compatible with "not being learned" as well).

²⁴ Literally: (those holding) the existence of external objects (*phyir rol don yod pa*).

		ii'a – in accordance with Sautrāntika ii'b – in accordance with Vaibhāṣika
--	--	---

2.2.2.3.3 Establishing the details [of the scriptural tradition]

What is to be realized in the sutras of the absence of characteristic will be established as the definitive meaning by delineating the system of the two truths, in accordance with our own way of taking sides, along with refuting others.

3. Explanation of the division of the two truths

[Verse 2] Here, the explanation of the division of the two truths is to be known through six points: the basis of division, the meaning of the division, the meaning of the terms, the specification of the number, the definitions, and the valid cognitions (that establish the definitions).

There will six points: the basis of division (I), the meaning of the division (II), the meaning of the terms (III), the specification of the number (IV), the definitions (V), and the valid cognitions (that establish the definitions) (VI).

I. The Basis of Division

Here, we assert the basis of division to be object of cognition without specification (literally, “mere object of knowledge”) [[[that is, not qualified by another property]]], (cognized by anyone) from omniscient knowers to the tiniest insects.

II. The Meaning of the Division

[[[Here, from among the three ways (of being distinct)²⁵]]] The meaning is that (the two truths) are two in terms of merely negating identity; they are property-possessor and property without division between appearance and emptiness, because one cannot speak of (their) identity or alterity. But it is not the case that they have the exact same defining characteristic or that they are different natures.

Here, (there are four options): (A) there is absolutely no difference; or, if there is (a distinction), (B) a distinction of natures; or (C) a distinction of properties for the same nature; (D) a distinction in terms of merely negating identity.

²⁵ The three are (B), (C) and (D) listed below.

The first (A) and second (B) are to be refuted by the four respective faults stated in the *Samdhinirmocana Sūtra*.²⁶ The third (C) and fourth (D) are to be examined from the distinction between the Illusion-like and Non-Abiding perspectives.²⁷

1. The view of Geshe pa

[[[According to Geshe pa]]]

1. The view that the two truths are distinct properties for the same nature (C) does not have the four faults stated in the SNS (against the view that there is no distinction)

[[[As for the stated faults (there are four): (i) when seeing the conventional, one would also see the ultimate and therefore it would follow that one would attain nirvāṇa; (ii) just as defilements increase in dependence on the conventional, it would follow that they would also increase in dependence on the ultimate; (iii) just as the ultimate is without distinction, it would follow that the conventional is also without distinction; (iv) just as the conventional cannot be sought apart from seeing and hearing, it would follow that the ultimate also could not be sought apart from seeing and hearing.]]]

For those who accept a distinction of properties for the same nature (C), the four faults of the *Sūtra* (against the view that there is no distinction) do not apply.

(i) There is no fault of attaining nirvāṇa when seeing the conventional

There is no contradiction for there to be superimpositions when seeing the conventional because even though the ultimate is seen, it is not ascertained, just like momentariness [[[just like superimposition of permanence when seeing blue]]]. Therefore, there is no [[[fault of]]] attaining nirvāṇa.²⁸

(ii) There is no fault of increase of defilements in dependence on the ultimate

There is no contradiction for one [[[the conventional]]] to be the support of thorough affliction but for the other property [[[the ultimate]]] which has the nature of that [[[the conventional]]] not to be [[[the support of affliction]]] [[[because they are two distinct properties]]], just like [[[for instance]]] blue is desired but momentariness is

²⁶ The source of the discussion is SNS III.3–5, where one finds the refutation of the view that the characteristic of the conditioned (*'du byed kyi mtshan nyid*) and the characteristic of the ultimate (*don dam pa'i mtshan nyid*) are different (*tha dad pa yin*), and the refutation of the view that they are not different (*tha dad pa ma yin*). The sūtra aims at showing that the ultimate transcends the notions of identity and difference with the conditioned. The four faults indicated in the sutra are rephrased here in the form of arguments by consequence. For an analysis of Phya pa's views on the same topic see Hugon 2016: 908–929. A preliminary discussion of rGya dmar ba's views in the *dBu ma de kho na nyid* and his *bDen gnyis rnam bshad* is to be found on pp. 925–928.

²⁷ See n. 68.

²⁸ SNS III.3: *gal te 'du byed kyi mtshan nyid dang / don dam pa'i mtshan nyid tha dad pa ma yin par gyur na ni des na byis pa so so'i skye bo thams cad bden pa mthong ba yin par yang 'gyur / so so'i skye bo kho nar gyur bzhin du grub pa dang / bde ba bla na med pa'i mya ngan las 'das pa 'thob par yang 'gyur / bla na med pa yang dag par rdzogs pa'i byang chub mngon par rdzogs par 'tshang rgya bar yang 'gyur ro //*

despised [[[by someone]]]. Thus [[[for this reason]]], there is no [[[fault of]]] increase of defilements in dependence on the ultimate [[[as there is with the conventional]]].²⁹

(iii) It is not the case that conventionalities are not distinct

There is no contradiction for subjects to be mutually distinct but for their properties not to be distinct, as it is said (by Dharmakīrti): "(Similar instances) are things which are similar on account of (possessing) the universal which is the property to be proven [[[e.g., smoke, etc.]]]³⁰.³¹ If it were otherwise [[[if there is no similarity on account of a universal]]], since mutually distinct property-possessors could not have any commonality [[[something like a mountain (cannot have any commonality) with a kitchen]]], their properties also could not [[[the mere fire on the mountain would have no commonality (with the kitchen)]]]. Thus, it is not the case that conventionalities are not distinct [[[in the way that reality is not distinct]]].³²

(iv) It is not the case that the ultimate could not be sought apart from seeing and hearing

While we accept that [[[the ultimate]]] is not to be sought as a different entity [[[from the conventional]]], it is a differentiation of characteristic, just as even though one realizes blue, momentariness is (still) to be known [[[the entailment between being of the same nature and not being sought as a different characteristic is not established]]]. Thus, it is not the case that the ultimate is not to be sought apart from seeing and hearing.³³

[[[Well then, are you positing that the faults of the *Sūtra* are not forthcoming?]]]
Therefore, if one does not accept even a mere distinction of characteristic [[[if one does not accept a mere distinction of exclusion properties]]], there is no doubt that these faults are to be stated.

2. The view that the two truths are distinct natures (B) is liable to the four faults stated in the SNS (against the view that there is a distinction)³⁴

If (the two truths) are distinct natures, there are four faults.

²⁹ This fault is different from the second fault in SNS III.4: *gal te 'du byed kyi mtshan nyid dang / don dam pa 'i mtshan nyid tha dad pa ma yin par gyur na ni / des na ji ltar 'du byed kyi mtshan nyid kun nas nyon mongs pa 'i mtshan nyid du gtogs pa de bzhiing du don dam pa 'i mtshan nyid kyang kun nas nyon mongs pa 'i mtshan nyid du gtogs par 'gyur ro //*

³⁰ The property to be proven is actually "fire".

³¹ PVin 3 D202a2; P299b1; NB_{Tib} D232a1-2. This is Dharmakīrti's definition of "similar instance" (*sapakṣa*) in an inference. For instance, when inferring that there is fire on a mountain pass because one observes that there is smoke, the similar instances are all the loci where there is fire (for instance, a kitchen).

³² SNS III.5 a: *gal te 'du byed kyi mtshan nyid dang / don dam pa 'i mtshan nyid tha dad pa ma yin par gyur na ni / des na ji ltar don dam pa 'i mtshan nyid 'du byed kyi mtshan nyid thams cad la bye brag med pa de bzhi du 'du byed kyi mtshan nyid thams cad kyang bye brag med pa dang /*

³³ SNS III.5 b: *...rnal 'byor pa dag 'du byed rnams la ji ltar mthong ba dang ji ltar thos pa dang ji ltar bye brag phyed pa dang ji ltar rnam par shes pa las gong du don dam pa yongs su 'tshal bar yang mi 'gyur ro //*

³⁴ On this set of four arguments and their source in the SNS see Hugon 2016: 925–925.

(i') Nirvāṇa would not be attained when seeing the ultimate

³⁵ Even when one manifestly sees the ultimate, since one would (still) perceive the conventional--the support of thorough affliction--separately [[[from the ultimate]]], nirvāṇa would not be attained.

(ii') The ultimate could not be the true nature of the conventional

³⁶ [[[Something that is a distinct entity (from something else) cannot be the true nature (of the latter).]]] Just like the pot (cannot be the true nature of) the blanket, the ultimate could not be the true nature of the conventional [[[because the ultimate and conventional are distinct entities]]].

(iii') The selflessness or mere non-establishment of the conventional would not be the ultimate

³⁷ Just as the mere non-establishment of a pot is not a blanket [[[because these two are distinct entities]]], the selflessness or mere non-establishment of the conventional is not the ultimate [[[because the two are distinct entities]]].

(iv') Afflictions and purification would occur simultaneously in a single continuum

³⁸ Just as the cognition of a pot and a blanket [[[occur at the same time]]], [[[if the two are distinct]]] since their apprehension is established to be individual, thorough affliction and purification would arise in the same continuum simultaneously [[[they would occur at the same time]]].
[[[So said Geshepa.]]]

2. Analysis of the arguments against view (B) in A.2 above

[[[(The opponent) sets forth rejoinders in order to correct that position (I.e., B) and (we) teach that these rejoinders are not suitable]]]

³⁵ SNS III.3: gal te 'du byed kyi mtshan nyid dang / don dam pa'i mtshan nyid tha da dpa yin par gyur na ni / des na **bden pa mthong ba** rnams kyang 'du byed kyi mtshan ma dang ma bral bar 'gyur (a) / 'du byed kyi mtshan ma dang ma bral ba'i phyir bden pa mthong ba mtshan ma'i 'ching ba las rnam par 'grol bar yang mi 'gyur (b) / mtshan ma'i 'ching ba las rnam par ma grol na / gnas ngan len gyi 'ching ba las kyang rnam par ma grol bar 'gyur (c) / 'ching ba de gnyis las ma grol nab den pa mthong bas grub pa dang / bde ba bla na med pa'i **mya ngan las 'das pa thob pa 'ang mi 'gyur** (d) / bla na med pa yang dag par rdzogs pa'i byang chub mngon par rdzogs par 'tshang rgya bar yang mi 'gyur ro (e) /

³⁶ SNS III.4: gal te 'du byed ki mtshan nyid dang / don dam pa'i mtshan nyid tha dad pa yin par gyur na 'ang / des na 'du byed kyi mtshan nyid thams cad la don dam pa'i mtshan nyid **spyi'i mtshan nyid du gyur pa ma yin par 'gyur ro** //

³⁷ SNS III.5 a: gal te 'du byed ki mtshan nyid dang / don dam pa'i mtshan nyid tha dad pa yin par gyur na ni / des na 'du byed rnams kyi bdag med pa tsam dang ngo bo nyid med pa tsam nyid don dam pa'i mtshan nyid yin par yang mi 'gyur /

³⁸ SNS III.5 b: ...kun nas nyon mongs pa'i mtshan nyid dang / rnam par byang ba'i mtshan nyid kyang dus gcig tu mtshan nyid tha dad du grub par 'gyur ro //

1. Rejoinders against the four faults against view (B)³⁹

Objection: Such a way of thinking has to be analyzed for the following reasons:

1.1 Rejoinder against the first fault (i')

[[[(As for) the first fault (i'),]]] (it does not apply) even if (the two truths) are distinct natures, insofar as, **(a)** when one sees the ultimate, perceiving the conventional is not ascertained to occur. [[[(The logical reason, "the conventional is perceived separately," is not established at the time of seeing the ultimate.)]]] **(b)** [[[(Even if we allow that it is established)]]] becoming thoroughly afflicted due to merely perceiving the conventional is not ascertained by the Noble Ones.⁴⁰ [[[(This is because although the Noble Ones perceive conventionalities such as form, they do not become afflicted.)]]] [[[(If one thinks in terms of a more specific logical reason,)]]] **(c)** Even if (the logical reason) is "because of perceiving the conventional separately [[[(as a separate nature)]]] from the ultimate," it [[[(i.e., the more specific logical reason "perceiving the conventional separately")]]] entailing "being thoroughly afflicted" is not established in any case.

Therefore, how do you draw the conclusion that there is no nirvāṇa?

Fault (i') against position B				Rejoinder against (i')
Subject	S	when one manifestly sees the ultimate	First characteristic of the logical reason (C1): L occurs for S Second characteristic of the logical reason (C2): L entails K Second characteristic of the specific logical reason (C2'): L' entails K	(a) C1 does not obtain (b) C2 does not obtain (counterexample: the Noble ones) (c) C2' does not obtain (counterexample: any case) (d) T does not follow
Logical reason	L	perceiving the conventional		
Specific logical reason	L'	perceiving the conventional separately from the ultimate		
(Directly) entailed property	K	one would have thorough affliction		
(Indirectly) entailed property	T	nirvāṇa would not be attained		

³⁹ In the four subsections that follow, the author analyzes each argument according to the rules of inference set by Dharmakīrti. These require that (a) the logic reason qualifies the subject, and that (b) the logical reason entails the property to be proven. If (a) fails to obtain, the logical reason is termed "non-established." Characteristic (b)—entailment—fails to obtain if a counter-example can be found, i.e., a case that is qualified by the logical reason but not by the entailed property. In the arguments under consideration, which are arguments by consequence (analogue to *reductio ad absurdum*), what the logical reason entails is not properly speaking a property "to be proven" but rather is part of an "absurd conclusion," something that the opponent is not expected to subscribe to. It is hence referred to in the summarizing tables as "entailed property." While the rules of inference require that (a) and (b) obtain in reality and are ascertained by a means of valid cognition by the cognizing subject, the rules of argumentation by consequence only require that (a) and (b) are accepted by the opponent (which can be the case even if they do not obtain in reality).

⁴⁰ The text literally reads "by the Noble ones", but this should probably be understood as "in the case of the Noble ones", as the interlinear note makes clear.

1.2 Rejoinder against the fourth fault (iv')

For the same reason, the final argument by consequence (iv') (does not apply) because **(a)** there is no ascertainment that they are undoubtedly perceived individually, even though they are different entities. [[[The logical reason, "being perceived simultaneously,"⁴¹ is not established. Even if we allow that it is established,]]]

(b) Due to merely perceiving that [[[that is, the conventional]]] at the time of this [[[of seeing the ultimate]]], there is no ascertainment [[[by the Noble Ones]]] of the consequence that there is thorough affliction [[[due to merely perceiving the conventional]]] at the time of purification.

Fault (iv') against position B				Rejoinder against (iv')
Subject	S	the two truths having distinct natures	First characteristic of the logical reason (C1): L occurs for S Second characteristic of the logical reason (C2): L entails K	(a) C1 does not obtain
Logical reason	L	being apprehended individually		(b) C2 does not obtain (counterexample: the Noble ones)
Entailed property	K=T	thorough affliction and purification would arise in the same continuum simultaneously		((c) T does not follow)

1.3 Rejoinder against the second and third faults (ii'),(iii')

[[[One must analyze to whom the two intermediate faults are addressed, those who accept or do not accept that the two truths are distinct.]]] **(a)** If one accepts that (the two truths) are distinct natures, one would accept the two intermediate arguments by consequence.

(b) If one does not accept that [[[i.e., that they are distinct]]], the logical reason [[[["because they are distinct"]]]] would not be found in reality or accepted. For whom would such an argument by consequence be voiced? ⁴²

Fault (ii')/(iii') against position B				Rejoinder against (ii')/(iii')
Subject	S	(the two truths)	First characteristic of the logical reason (C1): L occurs for S Second characteristic of the logical reason (C2): L entails K	(a) For supporters of B, K=T is accepted (b) For detractors of B, C1 is not established and not accepted
Logical reason	L	having distinct natures		
Entailed property in (ii')	K=T	the ultimate could not be the true nature of the conventional		
Entailed property in (iii')	K=T	the selflessness or mere non-establishment of the conventional is not the ultimate		

⁴¹ Actually, the logical reason is "being perceived individually". The note adds the specification that this perception is simultaneous, which is essential for the conclusion to be drawn, namely, that affliction and purification are simultaneous.

⁴² (a) means that an opponent who accepts position B would actually also accept the conclusion drawn in the argument by consequence (Cf. below 2.2 on whether the conclusion could be eliminated by Scriptures or has to be accepted). It follows from (a) and (b) that the arguments (ii') and (iii') are not proper arguments by consequence.

Thus, these faults (i'–iv') are to be rejected. [[[The argument is that the faults of the Sūtra do not apply.]]]

2. Teaching that the rejoinders are not suitable replies

2.1 Regarding the rejoinders against first and last faults (i'), (iv')

(a_i*) We accept that the conventional is the support of thorough affliction. [[[The conventional is the *** object of the Noble Ones and the object of ordinary people. Pleasant and unpleasant are superimposed on it.]]] If that [[[i.e., the conventional that is the support of affliction]]] is a different substance from the ultimate, it is not contradictory to perceive it [[[i.e., the conventional]]] separately, even when manifestly seeing the ultimate. [[[Just like, since a pot and blanket are distinct, when one perceives the pot, it is possible to perceive the blanket also.]]] Therefore, the occurrence of thorough affliction is not prevented [[[because it is possible]]]. Therefore, the conclusion of the first and last arguments by consequence are implied. But they cannot be accepted.

[Argument assuming the acceptance that “there is liberation through having made manifest the ultimate”]

(d_i*)

Alternatively, [[[since this is the intention of the Sūtra/if (you) say that this is the intention of the Sūtra]]] the assertion of liberation through the cause consisting in having made manifest the ultimate would be entirely impossible [[[for you]]] because, on account of perceiving the conventional (L) [[[which is separate from the ultimate which is being taken directly but separately]]], the support of thorough affliction that has the character of being superimposed as suffering and so forth, is not undermined [[[by this separate apprehension of the ultimate]]]. Just like by ascertaining sound to be impermanent, the apprehension of a pot as permanent is not excluded, because they [[[the two truths]]] are distinct objects.

As it is said (in PV II.222ab):

If its object is not refuted, it is not possible to reject it.⁴³

Thus, liberation through the cause consisting in having made manifest the ultimate would be entirely impossible.

Further, even if it were (possible), (c_{iv}*) having thorough afflictions at the very time [[[of making manifest the ultimate]]] (K) would not be contradictory and would be possible, just like superimposition of a pot as permanent [[[is possible]]] at the time of ascertaining sound to be impermanent, because (a_{iv}*) it is not contradictory to perceive individually (L) [[[because the objects are distinct]]].

⁴³ C. Pecchia (personal communication) proposes the translation “If its object (the self) is irreproachable/faultless, it is not possible to relinquish it” for this half-verse. “It” refers to affection (*sneha*). Possibly, this verse is cited here to show the parallel with the case of affliction: thorough affliction (K) cannot be relinquished, because its support—the conventional—is not undermined.

In summary, in so far as it is not contradictory to apprehend erroneously conventionalities (**a_i***) and to see the ultimate separately (**a_{iv}***), the mere possibility of the asserted position [[[that there is liberation through the cause consisting of having made manifest the ultimate]]] is refuted (=d_i*) and the undesired position [[[it is not desired that it is possible to perceive thorough affliction separately at the time of seeing the ultimate]]] follows (=c_{iv}*).⁴⁴

(b_i*)

[[[Having previously had the doubt that (becoming afflicted due to perceiving the conventional) is not ascertained by the Noble Ones, a specific (logical reason) was taken.]]]

Even without relying on [[[the specific logical reason, i.e.,]]] the specific apprehension of the conventional that is the support of thorough afflictions (**L' in i'**), there is no fault (**b**) that (becoming afflicted due to perceiving the conventional) is not ascertained by the Noble Ones [[[the fault) "it is not ascertained because even though the Noble Ones see the conventional, they do not become afflicted"]]].

This is for the following reason: Even though there is the mere apprehension of the conventional (**L**) [[[for the Noble Ones]], [[[the Noble Ones]]] making manifest the emptiness of all characters [[[making manifest) as empty]]], which is the true nature [[[or, the natural state]]] of conventionalities, is incompatible with apprehension [[[as distinct from the ultimate]]] under a mistaken aspect [[[as having afflictions]]]. But [[[for you it would follow that]]] these [[[that is, the occurrence of false superimpositions on the conventional and making manifest the ultimate]]] are compatible in the position of (the Two Truths) being [[[asserted to be]]] distinct [[[in reality]]].

Fault (i') against position B					Rejoinder against (i')	Rejection of the rejoinder against (i')
Subject	S	when one manifestly sees the ultimate		First characteristic of the logical reason (C1): L occurs for S	(a) C1 does not obtain	(a _i *) C1 obtains: it is not contradictory for L to occur for S
Logical reason	L	perceiving the conventional				
Specific logical reason	L'	perceiving the conventional separately from the ultimate		Second characteristic of the logical reason (C2): L entails K	(b) C2 does not obtain (counterexample: the Noble ones)	(d _i *) Given S and L, K and T follow; holding S and notT is impossible for proponents of B
(Directly) entailed property	K	one would have thorough affliction		Second characteristic of the specific logical reason (C2'): L' entails K	(c) C2' does not obtain (counterexample: any case)	(b _i *) In reality, for Noble ones K is incompatible with S and L. But for proponents of B, K is compatible with L, thus C2 obtains
(Indirectly) entailed property	T	nirvāṇa would not be attained			(d) T does not follow	
Fault (iv') against position B					Rejoinder against (iv')	Rejection of the rejoinder against (iv')
Subject	S	the two truths having distinct natures		First characteristic of the logical reason (C1): L occurs for S	(a) C1 does not obtain	(a _{iv} *) C1 obtains: it is not contradictory for L to occur for S

⁴⁴ Namely, for proponents of B, that nonT is the case for S in (i') is not established, and that K=T follows for S in (iv') is established.

Logical reason	L	being apprehended individually		Second characteristic of the logical reason (C2): L entails K	(b) C2 does not obtain (counterexample: the Noble ones) ((c) T does not follow)	(c _{iv} *) (Given S and L), K/T is not contradictory and is possible for S
Entailed property	K=T	thorough affliction and purification would arise in the same continuum simultaneously				

2.2 Regarding the rejoinders against the two intermediate faults (ii'), (iii')

Fault (ii')/(iii') against position B				Rejoinder against (ii')/(iii')	Rejection of the rejoinder against (ii')/(iii')
Subject	S	(the two truths)			
Logical reason	L	having distinct natures	First characteristic of the logical reason (C1): L occurs for S Second characteristic of the logical reason (C2): L entails K	(a) For supporters of B, K=T is accepted	(a) K=T is not accepted. It is eliminated by the reasoning that establishes the opposite (but not by the Scripture that states the opposite)
Entailed property in (ii')	K=T	the ultimate could not be the true nature of the conventional		(b) For detractors of B, C1 is not established and not accepted	
Entailed property in (iii')	K=T	the selflessness or mere non-establishment of the conventional is not the ultimate			

[[[If one thinks:]]] One does not accept the middle two consequences (ii', iii'), does one? [[[In this regard, there are two points: refuting others' position and presenting the answer according to our own position.]]]

2.2.1 (Jo btsun's) Refuting others' position⁴⁵

Suppose one [[[Jo btsun]]] would conceive of the following:

If one says that it is not the case (that one accepts the consequences), as this is eliminated by scripture [[[because it is established by scripture that the ultimate is the true nature of the conventional and the mere selflessness of the conventional is the ultimate (=nonK/nonT).]]], (one [i.e., Jo btsun] replies:) [[[We do not accept that one's own scripture establishes one's own scripture.]]] How can you say that the [[[posited]]] consequence (from a logical reason) that is contradictory with scripture is [[[eliminated]]] by scripture? [[[Scripture is not accepted (to have this power); if scripture is accepted (to have this power)]]] It would have sufficed to say [[[in the first place]]], "[[[It is said (in the scripture) that]]] those two [[[i.e., the two truths]]] do not have different natures."

Why should one depend on the action of scripture that eliminates something (to be) accepted that follows indirectly (from the premises in an argument by consequence)?⁴⁶ [[[Once one has stated, based on scripture, that what is explained

⁴⁵ We understand here that the "others' position" that is being refuted is that the conclusion of the consequence can be refuted through Scripture, and that the arguments against this position were put forward by Jo btsun. In spite of the problematic "rtog na" at the end of this section (which we translate: "suppose one would conceive"), rGya dmar ba does not reject these arguments.

⁴⁶ Or: "Why would the elimination of (what the opponent) accepts, which follows indirectly, depend on the action of scripture?"

to be the subject and its nature, etc., is not like that⁴⁷, then what is the use of putting forth an elimination by scripture of what is accepted (following the premise?)]] If it [[the preceding]] is not the case [[if nothing is achieved by stating, through scripture, that it is not the case that the natures (of the two truths) are distinct]], then scripture would not be suitable as a means to eliminate a thesis [[i.e., as what is presented as eliminating what is accepted (following the premise)]]⁴⁸ either.

2.2.2 Presenting the answer according to our own position

That the ultimate is the real nature of the conventional (notT=notK) must be accepted [[through just reasoning]] without depending on scripture. Otherwise, [[because]]⁴⁹ it is unsuitable for that very conventional that is different from the ultimate [[in your assertion]] not to have some natural state of being just as it is, i.e., as the object of analysis by final reasoning, this [[natural state]] precisely, which is the true nature of that [[[conventional]]], is the ultimate itself. Therefore, the [[object]] separate [[from the conventional]] asserted [[by you]] to be the ultimate, isn't the natural state of anything, nor the partner of anything, (it is not) the ultimate that is [[asserted to be]] the true nature of all phenomena, and is not what is decided upon in the context of analyzing whether the conventional is identical (to) or distinct (from the ultimate) and [[therefore]] there is no affirmation or negation [[of identity or distinction]] with regard to this [[i.e. your ultimate]] that is like something freely imagined.

Therefore, the [[two]] consequences apply to (your) combination of incompatible items: when asserting, (i) for the conventional, which is the object of mistaken awareness, that its true nature—[[the natural state of]] being just the way that it is, i.e., as the object of analysis [[by reasoning]]—is the very ultimate, [[this has been analyzed above (?)]], saying that (ii) these two [[that is, the two truths as you have asserted]] have distinct natures.

Due to just that [[the presentation of consequences to one who accepts that (the ultimate) is the true nature of the very conventional and that the two (truths) are distinct (natures)]], when anyone [[i.e., any supporter of a philosophical system]] presents the two truths in terms of being either [[false, objects]] of mistaken awareness or [[true,]] objects of non-mistaken awareness, the [[two intermediate]] consequences apply (to the two incompatible assertions): (i) insofar as, (for) the object of mistaken (awareness) [[e.g., (an awareness) apprehending mother-of-pearl to be silver]], the emptiness of truth as such [[of being silver in the case of mother-of-pearl]] is the perfected (character) devoid of the imputational (character), this is generally asserted [[by the opponent herself]]

⁴⁷ We understand this to paraphrase the previous sentence, namely, that the first premise is said not to obtain based on scripture (*chos can* and *chos nyid* would be referring to the subject and to the logical reason).

⁴⁸ The author of the annotations understand *dam bca'* in the sense of the conclusion of the consequence. But *dam bca' ba'i sel byed du* could also refer to scripture being a means to invalidate a thesis in inference for others, following Dignāga's definition of a thesis.

⁴⁹ Without the additional "because" (which appears in the gloss) it is difficult to construe the sentence in Tibetan

without depending on Scripture, and yet (ii) the assertion that these [[[the imputational and the perfected (characters)]]] are asserted to be distinct. Thus, [[[insofar as the elimination of the conclusion (thal ba) does not depend on scripture (in our opinion)]]] (I) think there is no fault [[[that it is not reasonable for scripture to eliminate consequences (thal 'gyur)]]] ⁵⁰.

3. Refuting the view of a distinction of properties for one nature (C)

If [proponents of view C] say:

[[[From the perspective of the exclusion property of being the support of afflictions, on the basis of which impurity increases, it is conventional; from the perspective of the exclusion property of being the support of mental purification, on the basis of which it is a basis for the extinction of all obscurations of the embodied, it is ultimate. Therefore,]]] ⁵¹ Is it not the case that it (the division between the Two Truths) is a distinction of properties for the same nature, like produced and impermanent? This is explained clearly in the *Commentary to the Eight-Thousand (Stanza Perfection of Wisdom Sūtra)*. Also, it is explained in the *Ornament of the Middle Way* that when one sees the conventional, the ultimate appears but is not ascertained. Similarly, in the *Lamp of the Middle Way*, the meaning of the sūtra passage, "Not seeing anything at all," is explained to be a term-bound negation (i.e., in the sense of "Seeing nothing at all"). In that way, it is clear that these (texts/authors) assert that illusion is the ultimate, and so this is [[[must be]]] accepted.

We answer: No, because this [[[the acceptance that illusion is the ultimate]]] is invalidated by scripture and reasoning.

1. Refutation by scripture (that illusion is ultimate)

- The *Diamond-Cutter Sūtra* states, "Any phenomenon for a manifestly, completely Awakened One is neither true nor false." [[[This states that illusion is not the ultimate.]]]
- The *Spell for Entering into the Non-Conceptual* states, "Non-conceptual wisdom [[[of meditative equipoise]]] knows all phenomena to be like the center of the sky; [[[If illusion existed ultimately, it would be correct that it is known by the wisdom of meditative equipoise; but this is not the case.]]] subsequently attained wisdom knows all phenomena to be like illusions."
- Innumerable (scriptures) teach by way of the example (of space exclusively), such as the *(Eight-Thousand Stanza) Perfection of Wisdom*: "Sentient beings use the words 'Seeing space.' Consider the meaning of 'like seeing space'." ⁵²

⁵⁰ The fault identified in the gloss corresponds to the last argument in 2.2.1.

⁵¹ With the expression "ldog pa nas", the author of the gloss probably has in mind the notion of *ldog pa tha dad* (distinct exclusion properties) as an equivalent of *chos kyi dbye ba* (distinct properties).

⁵² Alternative translations of this passage are for instance:

- Conze 1973: 32: "A vision of space is a being, so they declare. A vision like that of space, so should you consider that object! Thus has the vision of Dharma been expounded by the Tathagata. But it is not possible to report on that vision by definite statements [that differ from it]."

[[[When calling not seeing at all “seeing“, if (the ultimate that is seen were) like an illusion, why (does the sūtra say) this cannot be considered through another example?]]]

- (The *Teachings of Akṣayamati Sūtra* states), “There is not even movement of mind pertaining to the ultimate; how much less could it expressed in syllables?”⁵³
- [[[Mañjuśrī's Questions to the Conqueror's Children about the mode of existence of the ultimate (states),]]] “Conqueror's children, since it is known to be devoid of stain, it is just said to be pure.”⁵⁴

These are to be elucidated in that way.

2. Refutation by reasoning (that illusion is ultimate)

It [[[the assertion that illusion is ultimate]]] is also invalidated by logic because there is nothing that proves it and there is (an argument) that invalidates it.

2.1 There is nothing that proves (that illusion is ultimate)

[[[Of the two (potential) means of proof, there is no perception (that proves that illusion is ultimate); it would have to be an inference through (the reason) ‘neither one nor many.’]]]

(a)

In the case of the verbally-bound negation of ‘one or many’ [[[in the sense of not being established because of being non-existent]]] [[[if you assert that to be the logical reason]]], (the reason) would be inconclusive because of rabbit's horns, and so forth. [[[This is because even though the logical reason is actually found in (those), these are not established (?) to be existent as illusions]]]⁵⁵

(b)

In the case of a term-bound negation, namely if one asserts (as a logical reason) “because of appearing while not existing as one or many,” then (the reason) is deviant with regard to illusion-as-ultimate. [[[Inferring a specific from the general is deviant, like inferring śiṃśapa from tree-without-specification.]]] [[[This is because

-
- Hopkins 2008: 131:

“Analyze how space is seen as in the expression

By sentient beings in words, “Space is seen.”

The One-Gone-Thus teaches that seeing the *dharma* is also like that.

The seeing cannot be expressed by another example.”

- Apple 2016: 709: “Sentient beings call that “seeing space.” Through examining this meaning of how to see space, in this manner, the Tathāgata indicates seeing dharma as [8a] well. [This type of] seeing is not relatable through another example”

⁵³ Eckel (1987: 74, 121) translates: “Ultimate truth cannot even be known, let alone conveyed in syllables.”

⁵⁴ Or: Since the conqueror's children are known to be devoid of stains, they are said to be pure. But the gloss suggests that the « conqueror's children » are the persons spoken to in the sūtra.

⁵⁵ In the *bDen gnyis ti ka*, rGya dmar ba gives the argument in the form: “it would be inconclusive, because it is present in rabbit's horns, etc., which do not exist as illusions.”

correct conventional and so forth, which also do not exist as one or many, appear.]]]⁵⁶

(c)

In the case of a characterized [[[logical reason,]]] namely, if one asserts “because of appearing while being neither one nor many and being the object of reasoning,” [[[Since ‘being the object of reasoning is not found for correct conventionals, there is no inconclusiveness, however]]] the characterized [[[reason]]] is not established due to the nature of the reason [[[devoid of one or many]]] and the characterization [[[appearing and being the object of reasoning]]] being incompatible because objects of reasoning [[[which others positively assert]]] do not go beyond being one or many [[[these are not established to be neither one nor many]]].⁵⁷

If this were not the case [[[that this (reason, neither one nor many) is not a means of proof]]], [[[namely, if one does not concede (?) this difficult point as a refutation]]] Dignāga’s proof of ultimate non-duality [[[as experienced]]] on account of there being an invalidation of duality [[[of subject and object]]] [[[as the Idealist accepts]]] and clear experience [[[as being devoid of the duality of subject and object]]] would become a correct reason [[[that is not invalidated]]] and so Idealism could not be refuted.⁵⁸

Given that the explanation in the [*Madhyamaka*]-*āloka* refutes (Dignāga’s argument), stating, “the experience as true of a nature for which there is the invalidation of duality [[[of subject and object]]] is not established and a proof of the specific [[[instance of experience]]] --ultimate [[[experience]]]-- from the general – experience-without-specification -- is inconclusive,” it is also to be stated here (with regard to the putative logical reason for proving that illusion is ultimate).[[[(As said above in (b) and (c):) “This is because if one posits (as the logical reason) appearing-without-specification while not existing as one or many, (the reason) is inconclusive due to the correct conventional and if one posits a characterized (logical reason), appearing and being established by reasoning, (the reason) is not established because the nature of the logical reason and the characterization are incompatible.”]]]

Similarly, by this analysis, the refutation of the four alternatives of arising, etc.,[[[The verbally bound negation, devoid of production from the four alternatives, is inconclusive because of the donkey’s horns; (the term-bound negation) appearing-without-specification while being devoid of production from the four alternatives, (in which) something specific is deduced from the general, is

⁵⁶ “Appearing” is equated here to “illusion” in general, whereas the property to be proven is illusion-as-ultimate, i.e., a specific instance of illusion.

⁵⁷ Presumably “reasoning” refers here to reasoning consciousness, whose object is the ultimate. Therefore such a reason would not characterize correct conventionals.

⁵⁸ A parallel is being drawn between the logical reasons considered in (b) and (c) above and the two arguments of Dignāga. If the aforementioned reasons were acceptable, in a parallel way, Dignāga’s arguments would be bullet-proof. But, as shown in the next paragraph, they are actually refuted in the *Āloka* (probably Kamalaśīla’s *Madhyamakāloka*).

inconclusive because of correct conventional; the characterized (reason is not established) because the nature (of the reason) and the characterization are incompatible. This also applies to other cases.]]] are not suitable logical reasons (to prove ultimate illusion), and so there is no means of proof.

2.2 There is something that refutes (that illusion is ultimate)

There is something that refutes:

[a]

The meaning of illusion is the collection of being empty of truth and being a dependent arising; from that perspective [[[of being empty of truth and being a dependent arising]]], correct conventional also is (illusion), and so these [[[the two, ultimate illusion and correct conventional]]] would be indistinguishable.

Objection: We accept that there is no distinction pertaining to the nature. But as for the defining characteristic, there is a distinction [[[of defining characteristic]]]: when something is seen, it is a support devoid of desires because defilements are extinguished for all the embodied – this is what it is to be ultimate; the opposite is (the defining characteristic) of conventional.

Answer: The ground for positing illusion, based on the concept of a collection of two properties [[[void of truth and being a dependent arising]]] is also the [[[very same]]] ground for (positing something as) correct conventional. Thus, it is not correct (for something) [[[a single concept]]] to be the support of purification [[[from the perspective of ultimate illusion]]] and the very opposite [[[from the perspective of the) conventional, to be the support of affliction]]], [[[because there is no distinction of concept; for instance:]]] just like based on the (same) concept of being momentary, the state of depression and the state of desire are incompatible.

[b]

[[[The analysis of the negandum also is similar:]]] Furthermore, if illusion is established by reasoning, one must analyze whether it is established as one or established as many and whether it is produced from self or produced from other.

Opponent: The analysis [[[in terms of being one or many]]] does not apply to illusion.

Answer: If it does not bear analysis [[[while it can be illusion]]], the ultimate being established [[[positively]]] by reasoning is undermined.

[c]

Moreover, [[[the one who accepts in this way (that illusion is the ultimate) is surpassed in view even by the Substantialist Idealists]]], it is said (in the *Thirty Stanzas on Consciousness*):

[[[The idealist,]]] Having in thought “These two are ‘mind only’”

If one places anything at all [[[the support of a positive determination]]] before oneself through contemplation, It [[[the entity that is placed before oneself]]] does not abide in this mere (Consciousness).⁵⁹

[[[rGya said: Some people hold that the two – the perfected and the dependent – are one nature. This also is not correct. Even the idealists assert that the support of meditation is a simple negation. And the Mādhyamikas also assert that. And so, if it were to be identical with an implicative negation/negation with a positive remainder, it would be a mistaken cognition, and therefore would not be suitable as the path.]]]

And (saying, in the *Thirty stances on consciousness*)

The established [[[i.e., perfected]]] (Nature) is the complete absence of the preceding one [[[the imagined (cf. v. 20)]]] in that [[[i.e., the dependent]]].⁶⁰ (It) [[[this perfected nature (is)]]] is not different [[[and is]]] not non-different [[[from the dependent]]]; it is said to be like impermanence, etc.

Vasubandhu explained the perfected to be inexpressible as the same as or different from the dependent through the example of impermanence consisting in non-existence after destruction being inexpressible as the same as or different from entity.

And Asaṅga said (in the *Collection of the Great Vehicle*),

If the [[[external]]] object were established as the object [[[positively, as the object that is the support of meditation]]]

There would be no non-conceptual cognition [[[because it would be conceptual, there would be no non-conceptual wisdom]]]

In the absence of that, it is not possible to attain Buddhahood.

In that way, even the Substantialist Idealists assert that the support of meditation, the perfected, is a simple negation and so meditating on non-duality is meditation

⁵⁹ We translate on the basis of the Tibetan and in line with the interpretation of rGya dmar ba according to the interlinear note that follows, namely, that the “non-abiding” of the support of meditation means that it is a simple negation. The canonical version reads “through apprehension” rather than “through meditation”.

Kellner and Taber (2014: 747) translate the broader passage: “As long as cognition does not abide in mere-cognition the burden of the duality of apprehension does not cease. For even through the apprehension, ‘[All] this is mere cognition’, one does not abide in that [cognition] alone, because one [still] places something before oneself. If, on the other hand, cognition does not apprehend an object-support, then it stands firm in being mere cognition because, due to the absence of that [object] which is grasped, there is [also] no grasping of that [cognition which would grasp the object].”

⁶⁰ We translate on the basis of the Sanskrit and the Tibetan canonical version. The Tibetan version in the *dBu ma de kho na nyid*, which reads *dag* instead of *gang*, is problematic.

on emptiness. This being the case, meditating on illusion as the support of positive determination [[[I.e., in the case of Jo btsun positing illusion as established by reason]]] is the perfection of the fruition of a weary intellect.

2.3 [Contestation]

2.3.1 (Jo btsun's claim)

[[[According to Jo btsun, insofar as one asserts the subject to be appearing, because one understands the collection, in terms of the 'elimination of non-relation' (Skt. ayogavyavaccheda) between the property 'absence of nature' and the property-bearer, it is not possible to refute the logical reason consisting in the simple negation of one or many.]]]

Having this (i.e., the preceding refutation) in mind, since we assert as a logical reason the simple negation of one or many, the other faults [[[when set forth above]]] do not apply.⁶¹

And since illusion is the probandum consisting in a universal that is a collection [[[of being a dependent arising and empty of truth]]], what would be the need to explain the pervasion [[[of the reason]]] by that [[[collection]]].

And since the rabbit's horn is endowed with the property to be proven [[[i.e., absence of nature]]], it is a similar instance. Yet, we do not assert positive concomitance in an example that (must) be a universal that is a collection.⁶²

Thus, the teacher Dignāga said (in the *Compendium of valid cognition*):

The logical reason that is [[[a property that is]]] non-deviant from the property [[[to be proven]]] has to be shown elsewhere [[[in an example]]].

When it [[[the logical reason]]] is established in that [[[property possessor]]], (the) property-possessor is made known to be endowed with that (property to be proven).⁶³

[[[this property possessor (is made known to be endowed with the property) to be proven]]]

[[[the collection of (the property-possessor) and the [property] to be proven (is made known)]]] ⁶⁴

⁶¹ That is, the faults mentioned for options [b] and [c] in 2.1 above

⁶² In 2.1 (a), the objection against the reason as *med dgag* was that it would be inconclusive because the reason as a simple negation is found in rabbit's horns, which are not illusions.

⁶³ Translated on the basis of the Tibetan. The Sanskrit reads, rather "the non-deviance of the logical reason with regard to the property has to be shown elsewhere."

Hayes (1980: 256) translates: "It is the invariable relation of the indicator with the (inferred) property that is pointed out elsewhere. When it is established there, it will make the property-locus known to be endowed with that property."

Hayes (1988: 243) translates: "But it is the sign's inerrant occurrence with the property that is pointed out elsewhere. When known there it will make the property-bearer known to be endowed with the property."

⁶⁴ The two glosses offer redundant explanation of the sentence, but cannot be read together.

[[[Given concomitance with an example that [has] the property to be proven]]] If this wasn't the case, [[[the logical reason]]] 'smoke' would also be inconclusive (with regard to proving fire) because it is found in the kitchen which lacks a fiery mountain.

The answer (to that absurd consequence), that it (i.e. 'smoke') is actually a similar instance [[[and thus there is no inconclusiveness]]], etc., is the same [[[in all cases]]]. [[[(Namely): "The rabbit's horn as well is endowed with the property 'absence of nature', hence it is a similar instance, hence there is no inconclusiveness]]]

Thus, it is extremely difficult to refute illusion itself, which has to be accepted, insofar as the collection consisting in the 'elimination of non-connection'⁶⁵ with 'absence of nature' appears in inference [[[which is what Jo btsun taught]]].

Objection: Then, this [[[simple negation of one or many]]] is a correct logical reason to prove that [[[, yes?]]].

[[[Since Jo btsun is himself mistaken, (here is) the refutation of this.]]]

Answer: Taking as the probandum the collection consisting in the 'elimination of non-connection or of non-collection' [[[as Jo btsun does]]], what is this so-called "non-connection" that is what is to be eliminated [[[, which is a negandum]]]? Is it [[[is this negandum]]] the [[[mere]]] verbally-bound negation of 'connection' or [[[is the negandum]]] a term-bound negation?⁶⁶

(a) In the former case,

(i) Since the negation of a negation [[[i.e., of the verbally-bound negation of connection]]] is an affirmation [[[of connection]]], it isn't suitable that it (the verbally-bound negation of one and many) is a negating logical reason.

[[[If one thought that it is an affirming logical reason,]]]

(ii) And it is not suitable that what [[[the logical reason consisting in a verbally-bound negation]]] is taught as entailing a property [[[to be proven]]] that is a verbally-bound negation [[[since you say that the non-collection or non-connection of the subject and 'non-existence of nature' is negated]]] is an affirming logical reason.⁶⁷

(iii) And there is no other (sort of) logical reason [[[apart from affirming and negating]]].

Objection: [[[If one asserts that (the reason) is a negating reason,]]] [[[There are two forms of negation, verbally-bound and term-bound; from those two, this is the

⁶⁵ The "elimination of non-connection" (*ayogavyavaccheda*) is one of the three kinds of affirmation distinguished in Indian philosophy, the other two being the "exclusion of connection with that which is other than the qualificand" (*anyayogavyavaccheda*) and "exclusion of absolute non-connection" (*atyantāyogavyavaccheda*). See Kajiyama 1973.

⁶⁶ We would read: 'brel pa myed par dgag [[[tsam]]] mam [[[dgag bya]]] ma yin par dgag pa zhig.

⁶⁷ This might point out to the sādhyadharmā 'non-existence of nature' being a verbally-bound negation, or to the phenomenon that is the sādhyā being a verbally-bound negation, because of the way the sādhyā is conceived of.

second.]]] It is a logical reason that negates in that it applies as a term-bound negation.

Answer:

(No,) Because, by saying (in the *Commentary on valid cognition*)

This is because by this one [[[i.e., non-perception]]], a negation is established for an entity without a real part being included (/accepted)

(And) the previous probans [[[i.e. essential property and effect]]] affirm a term-bound negation.

a term-bound negation is explained (by Dharmakīrti) to be affirmed (not negated) (by the logical reason consisting in essential property or effect), and because it logically correct (that it should be so).

And since this [[[a term-bound negation]]] and the logical reason [[[neither one nor many]]] are not established to be connected, the former [[[the probandum that is a term-bound negation]]] cannot be inferred (from the latter) [[[from the logical reason ‘neither one nor many’]]]. And if it were inferred although not connection is established, there would be absurd consequences [[[it would follow that ‘pot’ would be inferred from ‘blanket’]]].

(b)

Objection: [[[According to dGe bshes pa, when speaking of “elimination of non-connection”]]] What is to be eliminated is a term-bound negation because what is to be eliminated is the appearing subject existing as an ultimate entity.

Answer: [[[We also accept that.]]] However, when we speak of “the negation of non-collection or non-connection [[[of the appearing subject and existing as an ultimate entity]]],” it is not the case that a collection, in which non-connection is negated, is established.

...

2.3.2/2.4? (Gangs pa?)

4. Our own position (=D)

Thus, it is not the case either that (the two truths) are distinct properties of a single nature. We assert as a convention that they are two due to the mere negation of identity; in reality, their being two makes no sense. For example, floaters [[[in an appearance that is a mistaken cognition]]] and the void of that [[[i.e., of true floaters]]] are not like that (distinct properties of a single nature) because they are not perceived simultaneously [[[because a non-mistaken cognition perceives the sky devoid of true floaters, but does not perceive floaters]]].

Further, this is because [[[something]]] being one essence [[[with something]]] entails (that they are) properties of entities (or real properties?), like product and impermanence; but here, there are not two properties of entities [[[that we could refer to as “appearance as floaters” and the “void of those”]]].

[[[“Aren’t they two natures?”]]] They are not distinct either because there are no independent floaters apart from the void [[[of true floaters]]].

Thus, one cannot speak of identity or alterity for emptiness with regard to floaters [[[appearing) in mistaken cognition]]] or for appearance with regard to mere emptiness [[[of true floaters]]]. In the same way, in reality, [[[conventional]]] appearances apart from the void [[[of a true nature]]] are not established independently and so there is no alterity. Absence of proliferations is also not a conventional entity and so it is not something of the same nature as would be ascertained among two properties of entities. The meaning of the division (is that the two truths are two) in terms of the mere negation of identity; (they are) property-possessor and property without identity or alterity. Since we analyze the meaning of the division in that way, we hold in common with Śāntideva and Jñānagarbha the system of Madhyamaka that takes sides regarding ultimate truth (i.e., the non-abiding position).⁶⁸

⁶⁸ In a parallel passage in his *Byang chub tīka* (59b4–5), rGya dmar ba specifies that his position on the meaning of the division relies on the Non-abiding position—which he identifies as Śāntideva’s view—whereas those holding the Illusion-like position subscribe to position (C) (*dngos po cig la chos kyi dbye ba*) (*dbye ba’i don ‘di ni rab du mi gnas pa’i lugs la ltos ste rnam par bzhag pa’o // sgyu ma lta bu’ ni byas pa dang mi rtag pa bzhin du bden pa gnyis dngos po cig la chos kyi dbye ba gnyis su ‘dod mod kyi / slob dpon ‘di ‘i lugs ma yin pas snga ma ltar yin no //*).

III. The Meaning of the Terms

1. Explanation of the Meaning of the Terms

[Verse 3]

Truths are asserted to be two in dependence on the perspectives of erroneous and non-erroneous consciousnesses.

Concealed

Concealed are consciousnesses that are erroneous in the sense of obscuring [[[reality and the arising of the path]]]; *saṃvṛti* is known to mean what obscures.⁶⁹ Since it is true in so far as it is true in that [[[erroneous]]] perspective, it is the true as object of the concealed. That itself is called “what is concealed” in so far as it is the referent of the erroneous concealer; it is not established in reality. It is said [by Nāgārjuna (in *Yuktiṣaṣṭika* 35)]], “Since the Conquerors have declared that nirvāṇa alone is true, what wise person would not think, ‘the rest are wrong.’”

Ultimate

[[[The meaning of the term, ultimate]]]

Since it is to be sought [[[by beings]]] as a goal, it is an object (*don*): a consciousness that is reasoning that sees correctly. Since just that [[[reasoning consciousness]]] is excellent and superior, it is also supreme (*dam pa*);⁷⁰ because it is a consciousness that realizes reality, having the nature of being non-delusive regarding the object, reality, it is not invalidated. Since it is true in that perspective [[[of a reasoning consciousness]]], it is true (*bden pa*); it is true as an object of the ultimate (*don dam pa*).

2. Refuting a particular part of the explanation

2.1. [[[Setting forth the explanation]]]

The following is said [[[by Gangs pa]]]:

Regarding this, there is the mere invalidation of existence [[[the negandum]]]. The mere non-establishment of existence is taken conventionally to be true from that perspective

⁶⁹ rGya dmar pa here offers an explanation of the Tibetan term, *kun rdzob*, with reference to the Sanskrit term, *saṃvṛti*, meaning “what obscures.” See *Satyadvayāvatāra* 15ab.

⁷⁰ The author explains here the term *don dam pa* (“ultimate”) as the conjunction of *don* and *dam pa*. On various explanations of paramārtha in the Madhyamaka tradition see Nagashima 2004. Cf. for instance SDVV ad 4ab: tshul gsum pa’i rtags kyis bskyed pa’i rtogs pa gang yin pa de ni dam pa yang yin la / don yang yin pas don dam pa’o //. See also PsP (494,1): paramaś cāsāv arthaś ceti paramārthaḥ /.

[[[of a reasoning consciousness]]]; however, there is nothing whatsoever that is attested [[[that is, established]]] [[[in the sense of a positive determination]]] as true as an actual object [[[of a reasoning consciousness]]].⁷¹

Objection: If there is nothing attested as an object, how could reasoning conventionally take anything to be true as an object?

Answer: The invalidation of existence by reasoning, the negation of existence by reasoning, and mere non-establishment are merely just taken conventionally as the object of that [[[reasoning consciousness]]]. In so far as there is nothing attested [[[in the sense of a positive determination]]] as an object, the Conqueror's sons remain silent.

In so far as reasoning merely completes the invalidation of existence, these meanings of the terms conveying "true as the object of ultimate reasoning" merely characterize the etymological explanation; they are not the definition. [[[If they were]]] What is conventional for omniscience [[[which has the nature of gnosis]]] does not entail obscuration [[[which is the meaning of the term, conventional]]]. As for reasoning consciousness also, it amounts to explaining the meaning of the term from the perspective of being a goal to be sought and being superior [[[if being true in that perspective was asserted to be the definition, ultimate truth would not be possible: since it is free of all extremes of existence, non-existence and so forth, ???; if it were possible, it would become the extreme of non-existence.]]]; since in reality it has the nature of being concealed, it is not ultimate.

2.2. The negation of that (explanation)

With this in mind, we explain [[[regarding the refutation of a particular part of that explanation, namely, saying that there is nothing attested as the epistemic object of a reasoning consciousness, there are two items:]]]: There is actually something attested as the object of reasoning [[[our own position]]] and that there is not something attested is to be negated [[[this is our own position]]].⁷²

2.2.1. There is actually something attested as the object of reasoning

This is explained by the following four points: the absence of nature is to be asserted as an epistemic object; it is not the case that realizing that (absence of nature) is not correct; there do not come to be proliferations through realizing; the fact that accords with conventions is attested.

2.2.1.1. The absence of nature is to be asserted as an epistemic object

While it might be the case that the invalidation of existence [[[the negandum]]] is completed by reasoning and that this is the mere non-establishment of existence [[[we ourselves also accept this]]], while precisely that [[[that is, the absence of nature]]] is not the object of a valid cognition that affirms, why wouldn't it be the object of a valid cognition that negates? The very non-establishment of existence is the definition of non-existence. If one [[[namely, you]]] accepts that the completion of the invalidation of

⁷¹ This is repeated in Chap. V, 12[1].i

⁷² This is repeated in Chap. V, 12[1].ii

existence by reasoning is just the non-establishment of existence, then the definition of non-existence is indeed recognized [[[there is recognition) as non-existence]]] by reasoning [[[that is, one realizes non-existence]]] [[[Therefore, non-existence is established as the epistemic object of valid cognition]]].

[[[Objection: If it were established as that, it would be the proliferation of non-existence.]]]

There is no [[[setting forth]]] “non-existence” attested in dependence upon existence. Since “dependence” means to be of benefit, is there anything positive [[[a positive non-existence]]] that benefits from existence? Or, would it be the case that [[[complete]]] (non-existence) is the repeated sublation of a passed existence? We do not assert a [[[non-existence that is a]]] companion elicited by its pair [[[for instance, “absence of nature”]]], and so forth, to be the meaning of non-existence; rather, the definition of that [[[namely, non-existence]]] is just the non-establishment of existence. That is attested [[[the definition of that (non-existence is attested) for emptiness]]] even though one does not experience an existent established from the beginning.

- If one accepts that [[[the absence of nature is a non-existence in the sense of the mere non-establishment of existence]]], then if one asserts [[[that there is realization (of that)]]] from reasoning, whereas it is incorrect [[[to realize that]]] from mere words, do you deny [[[saying “there is not (such a thing)”]]] while accepting [[[the absence of nature as an epistemic object]]]?
- If one does not accept the mere non-establishment of existence [[[which is the meaning of non-existence]]] due to its non-existence, then the negandum [[[ultimate nature]]] would become existent [[[because the negation of a negative is a positive]]].

Therefore, “the completion of the invalidation of existence by reasoning, which is the mere non-establishment of existence” is to be recognized as the meaning of non-existence.⁷³

2.2.1.2. It is not the case that realizing that (non-existence) is not correct

Objection: There is just the invalidation [[[by reasoning]]] of existence [[[the negandum]]]; there is no realization of non-existence [[[through taking it as an epistemic object]]].

Answer: No one accepts the realization of non-existence in the sense of positively realizing. The mere elimination of the negandum is the definition of non-existence; when reasoning eliminates the negandum [[[eliminating the negandum being) the definition of non-existence]]], reasoning indeed realizes that. If reasoning did not eliminate it, would it be eliminated by a mistaken cognition? How awful! [[[And further, when reasoning eliminates it, non-existence is established to be the epistemic object of a valid cognition.]]]

2.2.1.3. There do not come to be proliferations through realizing

Objection: There is merely invalidation toward existence, the negandum [[[by reasoning]]]. If it [[[that is, a reasoning consciousness]]] realizes as an object “non-

⁷³ Thus rGya dmar ba agrees here with the proponent of 2.1, but holds this not to be just a convention.

establishment” or “mere elimination,” then there would be the proliferation of non-existence.

Answer: That would be true if one asserted any positive determination as a referential object [[[of a reasoning consciousness]]]. Positive determination is the operation of establishment [[[of a valid cognition]]]. On the other hand, the operation of elimination is the mere elimination toward existence, the “non-establishment of existence.” We do not assert [[[valid cognition that is]]] a negative realization other than [[[apart from]]] reasoning eliminating the negandum because there is no other definition [[[for a valid cognition that negates apart from the elimination of existence]]]. If there were proliferations on account of just this [[[on account of the mere elimination of the negandum by reasoning]]], then it would be the same [[[for you, Gangs pa,]]] also [[[that proliferations would ensue]]] in the case of the “mere invalidation of existence” because positive determination is not asserted differently. [[[For two things that have the same definition, it is not reasonable for a fault to apply to one but not the other.]]]

2.2.1.4. The fact that accords with conventions is attested

Objection [[[someone says]]]: If one calls the mere elimination of establishment [[[that is, existence]]] “realizing non-existence,” then this has the same meaning as not negating (/the fact that accords is not a negation).

Answer: It is not a mere name because the fact of realization is attested. This is because the very non-establishment of existence in this way [[[that is, in the way things are]]] is attested to have the definition of non-existence; and, the superimposition of it not being attested in that way (as non-existence) is eliminated [[[also by reasoning]]]. The very elimination of the superimposition that is [[[apprehended to be]]] the opposite of something (x) is the definition of realizing that (x), just as [[[for example, in the context of affirmation,]]] the very elimination of the superimposition [[[as non-blue]]] that is the opposite of blue is the realization of blue. Therefore, valid cognition has the exclusion of what is other as its object. The elimination of the superimposition that is the opposite of, namely, what is other than, existence [[[just as yellow and so forth, (which is other than blue)]]] is the definition of realizing existence. The elimination of the superimposition [[[of existence, the negandum]]] as being other than non-existence is the definition of realizing non-existence. Just as when a valid cognition [[[that realizes fire from smoke]]] positively determines a probandum [[[fire]]] there is realization by a positively determining valid cognition, when a valid cognition eliminates a negandum, why wouldn’t there be realization by an eliminative valid cognition? The definition of non-existence is not other than mere elimination. Therefore, if one (still) maintains that it is not an object of realization in accordance with those facts [[[of the realization of non-existence and the realization of existence]]], this would apply the convention [[[saying that a non-entity is not an epistemic object of valid cognition]]] differently but the definition of [[[the eliminative]]] realization [[[of non-entity]]] is attested and so we have no fault.

2.2.2. That there is not something attested is to be negated

As for the negation of there not being something attested as the object of reasoning, we will state [[[two items:]]] the invalidating argument in four points—a reasoning

consciousness would not be a consciousness; it would be an invalid cognition; nature would be established; and your thesis would contradict your own words—and the negation of the proof for the statement of that not being attested.

2.2.2.1. The invalidating arguments

2.2.2.1.1 A reasoning consciousness would not be a consciousness

If the absence of nature is not accepted to be an epistemic object, is it **[[[not being an epistemic object]]]** due to **[[[the absence of nature]]]** not being an object of awareness although it is attested as non-existent or is it due to its non-existence not even being attested? In either case **[[[that were considered]]]**, **[[[we set forth the faults that]]]** a reasoning consciousness would not be a consciousness **[[[and it would not be a valid cognition]]]** because it would not have an object of cognition, like **[[[for example]]]** a pot.

It is not the case that that **[[[the reason]]]** is not established because

- **[[[if one thinks it would have an epistemic object]]]** in relation to **[[[investigating]]]** conventional objects, **[[[in relation to that]]]** it is not a reasoning consciousness **[[[for whom would there be a reasoning consciousness that lacked an epistemic object?]]]**; and
- **[[[according to what you assert]]]** the ultimate is not an object of cognition or awareness; and
- there is no other **[[[object of cognition apart from those two (conventional and ultimate)]]]**; and
- even if there were, it **[[[the cognition that investigates (that which is other than conventional and ultimate)]]]** would not be a reasoning consciousness in relation to that **[[[that is, that consciousness (would not be a reasoning consciousness in relation to) this other epistemic object]]]**.

[a]

[[[Gangs pa's assertion indicates that there is no cognition without an object of cognition.]]]

[[[The answer to that is said to be the following: If one says that it exists in reality, it could not be a cognitive agent of something to be cognized because it does not have a present object of cognition. If one says that it has an object of cognition, we answer that a cognition that would be a basis is absolutely impossible. This is the genuine answer.]]]

If someone said **[[[If someone answered]]]** that appearances existing as the nature of dependent arisings (is the object of cognition), you would say that since it is a cognitive agent of something to be cognized **[[[that is, (appearances) existing as the nature (of dependent arisings)]]]**, it **[[[the reasoning consciousness]]]** is a cognition.⁷⁴

[[[This is not correct; if it was like that (there would be the following consequence from the parallel argument):]]]

A visual cognition that apprehends a pot would be a cognition of everything possible **[[[a pot, a blanket, and so forth]]]** and impossible **[[[self, primordial nature, and so forth]]]** in

⁷⁴ The opponent wants a reasoning consciousness—which is held by this opponent to lack any object of cognition—to be counted as a cognition due to the subsequent cognition that appearances are of the nature of dependent arisings.

the three realms; this is because if someone objected that a pot [[[apprehended by a visual cognition]]] exists in the nature of everything [[[possible and impossible]]], you would respond that it is a cognitive agent of something to be cognized [[[by visual cognition]]]. If you agree, [[[then self, primordial nature, and so forth would have the same nature as pot; if one accepts the existent of a knower without an object, we conclude]]] since all things—such as a stick-holder without a stick—would be possible, [[[in that case]]] absurdities would ensue.

Further (suppose the following argument:), regarding the claim that permanent things, such as space, exist as entities, suppose it was said that because they will become causally efficacious [[[which is the definition of entity]]] they [[[space and so forth]]] are called causally efficacious [[[and so exist as entities]]], we argue that it is not suitable for something [[[such as space]]] to be causally efficacious merely because they will become [[[causally efficacious]]].

(*Mutatis mutandis*,) that [[[reasoning consciousness]]] also is established not to be a cognition [[[because regarding the claim that appearances having the nature of dependent arisings serves as the object of cognition, the reasoning consciousness is not established to be a cognition merely because (appearances having the nature of dependent arisings) will be cognized]]].

[b]

[[[Lotsawa's assertion explained in the small commentary on *The Two Truths*]]]

Here, reasoning consciousness is of two types: [[[utterly]]] non-conceptual [[[gnosis]]] and inference [[[that eliminates actual proliferations]]]. The first operates without distinction from the object of cognition [[[their duality is utterly not established]]], and so is like pouring water into water; it is just accepted [[[in the small commentary on *The Two Truths*]]] that it is not a cognition.

Regarding the second [[[that is, inference]]], if one says that it is a cognition [[[because it has an object of cognition]]] in relation to the mistakenly assumed object of positive determination [[[thinking, “I realize the absence of nature”]]] [[[even though in reality the ultimate surpasses objects of cognition]]], is the mistakenly assumed object not an epistemic object of a valid cognition or is it?

- In the prior case [[[if it is not]]], the cognition would not be a valid cognition [[[because the epistemic object is not that (mistakenly assumed object) and there is no other (object)]]].
- In the latter case [[[if it is]]]⁷⁵,
 - If it [[[the mistakenly assumed object]]] is the object of a valid cognition that investigates the non-concordant ultimate, the ultimate would be established as an epistemic object.
 - [[[Although the non-concordant ultimate is not the epistemic object of a reasoning consciousness,]]] If (the mistakenly assumed object) is the object of a conventional valid cognition [[[if one held that option, the epistemic object of a reasoning consciousness does not come to be established through establishing the epistemic object of a conventional

⁷⁵ The note mistakenly reads *ma yin ba*.

valid cognition; what would be the benefit?]], then the latter just would not be a reasoning consciousness that investigates the ultimate.

[d]

Objection: The mistakenly assumed object of a reasoning [[[consciousness]]] of the ultimate (or, ultimate reasoning consciousness) is just conventional.

Answer: It is valid cognition with regard to just that because inference engages just the object of thought.

[e]

Objection: When analyzed by another introspective awareness, since the conventional positive determination is attested as the mistakenly assumed object it is a cognition in the perspective of that [[[mistakenly assumed object]]]. However, it itself [[[inferential cognition]]] is deluded by nature regarding its own engagement [[[by way of thinking “I realize the absence of nature”]]], and so the positive determination itself [[[when directing the mind]]] is conceived of as a mere elimination [[[of the negandum]]]; therefore, [[[its being valid cognition comes from the elimination, but]]] (inference) is not valid cognition in relation to the positive determination.

Answer: The elimination is established to be the epistemic object, just as, for example, a concept [[[a fiery mountain pass]]] that is just positively [[[inferentially]]] apprehended is conceived of as a particular [[[the fire behind the mountain pass]]] and thereby, the particular is taken to be the epistemic object [[[of inference]]].

Although there are statements that non-conceptual gnosis [[[which is asserted to be like pouring water into water]]] has its continuum cut [[[since there is (this statement)]]], calling a brahmin’s son “fire” does not give him a nature of fire. [[[Similarly, even if the convention “gnosis” is applied, it is not correct (that it is actually gnosis?) because (according to the previous statement) that does not exist.]]]

2.2.2.1.2 (A reasoning consciousness) would become an invalid cognition

A reasoning consciousness would become an invalid cognition because of not having an epistemic object, like a cognition arisen from words.

[[[This is established by reasoning.]]] The definition of valid cognition is attested in relation to an epistemic object: being non-delusive in relation to its determined object⁷⁶ or illuminating a previously unknown object.⁷⁷ [[[This being Lotsawa’s system, we assert that (a valid cognition) not having an epistemic object is not established.]]] Thus, there is no denying the entailment. This is said to be correct [[[by followers(?) of Jotsunpa / the Honorable Jotsunpa]]] in other contexts also, as when establishing a convention [[[when establishing (something) as a synonym (of something else)]]]⁷⁸, [[[it is an invalid cognition]]] on account of its not having an epistemic object. There is absolutely no fault

⁷⁶ Per Dharmottara’s definition.

⁷⁷ Per Dharmakīrti’s definition in PV II.5.

⁷⁸ Perhaps referring to “being an invalid cognition” and “not having an epistemic object” being synonyms, this being reported as Lotsawa’s position in the notes to V.1.2[3][a.2]4[d], folio 9b2.

of the entailment not being established according to the position [[[asserted by Lotsawa]]] of (these two) not being logical reason and what possesses the logical reason (that is, the property to be proven) [[[in the proof] “because of not having an epistemic object, it is an invalid cognition”]]].

In the position asserting that the ultimate is not an epistemic object, one must accept that the logical reason [[[“because of not having an epistemic object”]]] is a property of the subject, as previously explained [[[there is nothing else apart from conventional truth⁷⁹ and ultimate truth]]].⁸⁰

[a]

If it is said, “the negandum itself is not an epistemic object,” [[[by way of saying, “This does not exist” when it does not exist,]]]⁸¹ (what about the probandum?) The [[[direct]]] epistemic object of inference is the probandum of the logical reason [[[therefore, the logical reason negates that negandum]]]. Therefore, if one negated that [[[the probandum) asserted to be the epistemic object]]], (the logical reason) would become a contradictory (reason) turning around the probandum [[[and the negandum]]]. The negandum would become a similar instance because it is a probandum [[[this is because the epistemic object of inference is the probandum of the logical reason; that negandum also would be the epistemic object of the inference]]]⁸², just as fire is something to be proven by smoke.

If [[[one thinks that]]] the epistemic object of inference [[[that has come to be the negandum]]] is not the probandum of the reason [[[but is a convention consisting of a negation]]], [[[well then,]]] why would inference rely on the logical reason?

One might say, “[[[It relies on the logical reason in so far as]]] The logical reason negates that [[[negandum]]].”

Well then, the negation would be established as the epistemic object [[[of inference]]].

[[[Accepting that negation is established to be the epistemic object of inference,]]] One might say, “The negation is a property of the negandum [[[and so the negandum is an epistemic object]]].”

The negation and the negandum would not be contradictory [[[if these two are property and property possessor]]]. The negandum would also be a similar instance because it possesses the property to be proven [[[the negation]]]. If the negandum is a similar instance,]]] A similar instance is not also something to be negated.

⁷⁹ Here, *tha snyad kyi*, rather than *kun rdzob*.

⁸⁰ See section III.2.2.1.1.

⁸¹ The note might explain what a negandum is or might refer to the non-existence of a reasoning consciousness’s epistemic object.

⁸² The note here seems to take the argument in a different direction.

2.2.2.1.3. Nature would be established

[[[In connection with the last of the two options given above,]]]⁸³

Objection: It is not just that it [[the absence of nature]] is not an object of investigation; it is not attested ultimately even as being non-existent. [[If it is not attested even as being non-existent,]]

Answer: Nature would be established, for it is said (in PV IV.221), “How would the negation of a negation be anything other than an affirmation.”

Objection: Even though it is not attested as non-existent, it does not come to be existent because of being free from all extremes.

Answer: Could you negate both of two things [[namely, the existence and non-existence of nature]] that are mutually eliminative [[in the sense that the affirmation of one eliminate the other]]? In that case, even though one negates that the logical reason is found in dissimilar instances, it would not come to be found [[in similar instances]]; [[since they are direct contradictories that affirm and eliminate each other, by negating that the reason is found in dissimilar instances it is established to be found in similar instances; this is the rule.]] (If this could be so) it would not have been said [[by Dharmakīrti]], [[regarding the logical reason in dissimilar instances,]] “If it is not excluded from that, does one accept that the logical reason applies [[to dissimilar instances]]?”⁸⁴

Objection: It [[what is said about (the rule of double negation)]] is conventionally so.

Answer: If the negation of non-existence does not come to be [[real]] existence ultimately, it is the same conventionally, as well [[that is, negating the presence (of the logical reason) in dissimilar instances would not establish its existence in similar instances]].

2.2.2.1.4. Your thesis would contradict your own words

There would also be a contradiction with your own words: the thesis of non-existence—“it is not existent”—negates “it is not non-existent.” For instance, the statement “all inferences that establish epistemic objects are not valid cognitions” negates their having an epistemic object. On the other hand, the inference that negates that, which ascertains on the basis of one’s own words, establishes the possession of an epistemic object [[that is ascertained by way of another (means)]]. Since that very (inference) is included in the general negation of inference [[that all (inferences) are not valid cognitions]], its having an epistemic object has been negated; something else that establishes an epistemic object (would be required) to establish that (the inference) has an epistemic object.

⁸³ At the start of section III.2.2.1.1.

⁸⁴ Dharmakīrti seems to accept that the logical reason would apply, and so this statement supports rGya dmar pa’s claim of that one cannot negate both of two things that are mutually eliminative.

2.2.2.2. The negation of the proof for the statement that this is not attested

Having stated in that way the invalidation of (the claim that the absence of nature) is not attested as non-existent,⁸⁵ we negate the proof [[[that establishes “non-existence is not attested”]]]. [[[The reason:]]] One or many, production from the four alternatives, and so forth, [[[being devoid of which (the opponent presents as) applying to non-entity not being attested]]] do not pervade non-entity; therefore, being devoid of those [[[being devoid of one and many and so forth]]] does not eliminate being attested as non-entity [[[which is the opposite position from your assertion that (the absence of nature) is not even attested as a non-entity]]] ultimately for form and so forth.⁸⁶ And how would dependent arising and so forth, which also are not contradictory with being attested as a non-entity ultimately, negate non-entity? [[[It is not appropriate to state, “(the absence of nature) does not exist even as a non-entity because of being (a dependent arising).”]]] The means of proof for non-entity being not attested ultimately are not different from the means of negating that.

[2.3. Conclusion]

In that way, through (the arguments that) there is something [[[a non-entity]]] attested as the object of ultimate reasoning and through negating that (even a non-entity) is not attested, we do not consider correct what the teachers [[[Gangs pa]]] say, namely: the mere invalidation of existence, the negandum, by reasoning is just conventionally taken as true in the perspective of reasoning, but there is no epistemic object of reasoning.

Therefore, being true in the perspective of obscuring in merely grounded in the etymological explanation [[[but this is not the definition; this is correct]]]; however, there is no fault in taking “being true in the perspective of reasoning” as the definition [[[of ultimate truth]]].

This [[[accepting “true in the perspective of reasoning” to be the definition]]] is not invalidated either by the fact that reasoning [[[consciousness]]] is a concealing truth. Since reasoning is a goal to be sought by those who (want to) remove obscurations, it is an object (*don*); since it is superior as being characterized as non-delusive with regard to the ultimate, it is supreme (*dam pa*); and so it is asserted to be ultimate (*don dam*).⁸⁷ However, it is not asserted to be ultimate truth.

Thus, that [[[a reasoning consciousness]]] which is ultimate from the point of view of eliminating proliferations [[[but]]] is included among the concealed from the point of view of appearances [[[the nature of the awareness that is a reasoning consciousness]]]. [[[Since the awareness that is a reasoning consciousness eliminate proliferations, it is ultimate; in relation to its nature, since it is an appearance, it is concealed. Therefore, while engaging the same entity, truths are two: they are distinct in the sense of not being one because one is appearance and the other is emptiness.]]] However, when dividing the

⁸⁵ In sections 2.2.1.3 and 2.2.1.4.

⁸⁶ It would seem “form and so forth” is carried over from the usual subject of the “devoid of one and many” inference that establishes the absence of nature; the idea seems to be that the logical reasons would apply to form and so forth but would not apply to the absence of nature regarding form and so forth.

⁸⁷ See above, n. 70.

definition, being attested as the object of that which is ultimate from the point of view of reasoning [[[this]]] is held to be the definition [[[of ultimate truth]]]; it is absolutely not the case that the definition of ultimate truth is impossible and so forth.

3. Summary

Thus,

[Verse 4]

We assert that the mere invalidation of existence, (existence being) the negandum, is the meaning of the non-establishment of existence

Although just that is not an object of affirmation, it is attested as the object of a negating awareness.

Although it is not set forth as the object of a positive determination, one realizes the elimination of the negandum.

[Verse 5]

For this very reason, the absence of proliferations is not merely nominal, because mere elimination is attested to be the definition of realization. Therefore, it (elimination of the negandum) is attested as the object of reasoning.

[[[These (verses) summarize the position of (elimination) being attested as the object of reasoning.]]]

[Verse 6]

If this was not the case, it would be difficult to posit reasoning as a consciousness or a valid cognition.

Because there would be the consequence that nature would be established, because this would contradict your own words, because there are refutations, and because there is no proof, (the absence of nature) is not not attested as the object of reasoning.

IV. The specification of the number

[Verse 7ab]

Truths are asserted to be determined to be two because there isn't another (consciousness) apart from the two [[[erroneous and non-erroneous]]].

1. Lo tsa's position

{the determination of a two-fold object of knowledge amounts to the determination of a two-fold consciousness (erroneous/non-erroneous);

Engaging the object mistakenly and engaging it non-mistakenly are mutually exclusive, therefore a third possibility does not exist; this is ascertained by the application of a single valid cognition.

There is no mutual dependence because it is the same realization that determines that consciousness is twofold and that the object is twofold.

The object of non-erroneous (cognition) is not invalidated by the emergence of another cognition, therefore it is called "permanent/stable". The object of erroneous (cognition) is invalidated (by the emergence of another cognition), thus it is conventionally referred to as "impermanent"

[[[That much is said to be correct]]]]

2. Objections with regard to that

{Objection: non-erroneous cognition and (something) being true as its object does not work for the partisans of the view that no nature whatsoever is established, because a nature (the non-erroneous cognition and the true object) would be established. If one divides the truths into two by imagining this (even though it is not possible), one could also imagine a third option, thus affecting the numerical determination.

Reply: If one says that one asserts two truths because non-erroneous cognition is possible; and one says that there is no third truth because a third option is not possible, this destroys the truth; but this is not what we say.

We say that that it is because another than the two options is not possible.

There is nothing apart from the conceptual cognition 'I accept without analyzing' and the conceptual cognition 'I accept after having analyzed and examined in reality' – this is ascertained by a conventional valid cognition.

→ the object of these two is also established not to go beyond the two options of what is to be accepted.

One calls "object of non-erroneous (cognition) the option 'to be accepted upon analysis" and the other is called "object of erroneous (cognition).

A truth beyond these two, that would be an option, is to be negated". }

3. Explanation considering that

{rGya's refutation of part 2 above}

{The position of others is that the negandum is the ultimate; thus the numerical determination of the two truths based on the negandum is not correct. One should make the numerical determination based on the probandum (i.e., the absence of nature)

3.1 Specification of the number based on the negandum is incorrect

{It does not work either according to the Non-abiding Madhyamaka position or according to the substantialists, nor in some kind of general view accepting that the two-fold object establishes a two-fold truth, and then proceeding to refute an ultimate nature.}

3.2 Presenting the specification of the number based on the probandum

3.2.1 Status of object and subject based on the probandum

3.2.2 Not invalidated due to the lack of ultimate inference

3.2.3 The negandum is not proper as an object of reasoning

V. Definitions

[1. The actual definitions of the two truths: the respective definitions of the two truths according to our own position and explaining the teachers' statements]

1.1 The respective definitions of the two truths according to our own position

[[[illegible note (Finally, presentation of one's own position)]]]

[Verse 12ab]

For the sake of explaining: non-veridical objects of cognition are
concealed; the opposite is the other

1.1[1] On the Definition of Concealed

Objects of cognition that do not withstand analysis are concealed. This very meaning

[[[that is, that objects of cognition that do not withstand analysis are concealed]]]

is captured by the statement, [[[that is, the root text,]]]

“Just that which is as it appears is concealed” [SDV 3cd]

in so far as it expresses the object of apprehension engaged in terms of unanalyzed appearances, because of the explanation [[[in the commentary]]] [SDVV ad 3cd], “concealed truth exists in that way, not genuinely. [[[If [it is not genuine], it is clear that it does not withstand analysis.]]]”

[[[If one takes object of cognition without specification to be the definition of concealed,]]] Object of cognition, that is, object of awareness, without specification is not accepted to be the definition [[[of concealed]]] because

- it [[[that is, object of cognition]]] is a distinct phenomenon [[[that is, it has a (distinct) intension]]]⁸⁸ from “concealed” [[[as Jo btsun said]]] and [[[or, alternatively,]]]
- the definition would be over-extensive, applying to the ultimate.

[a]

Objection [[[If one said that the definition (of “concealed”) consisting in object of cognition without specification is not over-extensive, applying to the ultimate]]]: Is not the ultimate beyond all cognition and expression? [[[If, therefore, it is not an object of awareness, it is not correct that anything non-existent would be that; however, it is nowadays unanimously accepted that awareness takes as its object the horn of a rabbit covered in mud, although it is not existent when analyzed.]]]

Answer: We have already explained [[[in verse III.2]]]⁸⁹ that (the ultimate) exists [[[and is established]]] as it is as an object of cognition; we negate that it does not exist as such.

[b]

Objection: It [[[that is, the definition of concealed]]] is empty [[[of truth]]] when analyzed [[[comment: *shes bya mi dges par* “if not satisfied (*dgyes pa*) with object of cognition” or “without bifurcating (*dgas pa*) object of cognition (into conventional and ultimate)”]]] without specification.

Answer: (No) because while (empty when analyzed without specification) can define ultimate void [[[of truth]]] without specification,

- it [[[that is, void of truth]]] is a distinct phenomenon [[[that is, it has a (distinct) extension]]]⁹⁰ from “concealed” and
- it is over-extensive, applying to the ultimate [[[truth]]].
- [[[It would follow that a sharp horn existing on the head of a rabbit, because of being empty when analyzed, would be concealed.]]]

[c]

Objection: The aggregate [[[of the two, empty when analyzed and being an object of cognition]]] also would over extend, applying to the ultimate [[[because the two individual parts apply]]].

Answer: What is empty when analyzed, which itself is also an object of cognition, [[[that is, a common basis (of the two)]]] definitely over extends.

Therefore, [[[the unspecified aggregate is not suitable and]]] we do not accept the above as definitions individually, but (we accept) the specified aggregate [[[namely, that object of cognition taken as a common basis that itself is not veridical when analyzed]]]: any object of cognition, not veridical, in that way, [[[namely, in the way that would be correct from the point of view of analysis]]] when explained.

[[[Nevertheless, [[[according to some, a restriction applied to object of cognition]]] ‘non-veridical when explained itself’ suffices (to define concealed). Indeed, the ultimate is true

⁸⁸ *don ldog*

⁸⁹ See also section IV.2.1, folio 8a1.

⁹⁰ *don ldog*

when analyzed; it is not established to be non-veridical. If that alone is not proper and ‘object of cognition’ is added, there would be over-extension because the phenomenon exists in entities.⁹¹ [Reply:] Absurdities would ensue because the phenomenon (non-veridical?) would be limitless.]]]

All proponents of philosophical systems assert that as the definition of concealed. [[[Objection: Well then, what are the dissimilarities among philosophical systems?]]] The only dissimilarity [[[namely, (a dissimilarity) in the definitional basis]]] is due to Mādhyamikas asserting that it [[[the definition of concealed]]] is also found in the dependent. [[[Idealists assert that it is found in the personal self and phenomenal self and the duality of subject and object. Vaibhāṣikas⁹² assert that it is present in personal self as either of the two, (objects or minds).]]]⁹³

Therefore, this agrees with what is said [[[by the Lotsawa]]] about the valid cognition that determines the concealed, namely that it consists in [[[or, established by]]] the operation of the two valid cognitions that negate veridical and [[[as said) by the Lotsawa in his small commentary on the two truths]]] determine on the level of appearance,⁹⁴ because (the two aspects of concealed thus determined, ‘non-veridical’ and ‘object of cognition’) are precisely the epistemic object of the valid cognition that determines the definition. [[[Thus, their taking ‘object of cognition’ as the definition is mistaken.]]]

1.1[2] Ultimate

(The word “the opposite” in verse V.1b means) “the opposite of an object of knowledge that does not exist in that way when analyzed.” [[[The meaning of the root text’s (verse 3cd) “what is different is the other of the pair” is just this.]]] It remains in reality, when a mind [[[that is, a reasoning consciousness]]] analyzes it. It is said [[[by (Jñānagarbha) in his *Satyadvayavibhāṅga*, when commenting on that]]] “What is ultimately veridical is ultimate truth; this means just truth that is concordant with reasoning.”

That is the definition of the ultimate according to all proponents of philosophical systems. [[[Indeed, Idealists assert that it applies to consciousness that is empty of the duality of object and subject. Vaibhāṣikas⁹⁵ assert that it is found in both object and mind empty of personal self.]]] The only dissimilarity [[[with Realists]]] is due to Mādhyamikas asserting that it [[[that is, the definition]]] is found in the absence of proliferations, whereas (the) others assert it [[[that is, the definiendum]]] for real phenomena. Thus, it is said to be attested by reasoning to be devoid of all extremes, such as non-existence, which are drawn from the pairs, permanence and annihilation, existence and non-existence [[[this is what is called ultimate truth]]].

⁹¹ Argument unclear

⁹² Text reads *bye brag pa* instead of the usual *bye brag du smra ba*.

⁹³ Cf. 2.2.1, Table 1

⁹⁴ Or, “that it consists in the negation of veridical and the operation of the two valid cognitions that determine appearances.” In either case, the two-part mental operation would encompass the two parts of the definition of concealed, non-veridical and object of cognition. See also Section VI.1.1.

⁹⁵ Text reads *bye brag pa* instead of the usual *bye brag du smra ba*.

[a]

Objection: How can the void of all extremes be the object of reasoning?

Answer: This is because reasoning eliminates all extremes [[[it (that is, devoid of all extremes) is attested (by reasoning to be the elimination of all extremes)]]]; this was already explained. [[[If one thinks, “Is not this contradictory with the statement that objects of awareness are concealed?”]]] (The *Bodhicaryāvatāra* IX.2cd) states, “The ultimate is not in the scope of awareness; awareness is asserted to be concealed.”⁹⁶ In as much as all objects of awareness that are referents are concealed, and in as much as an entity of awareness that does not engage by way of feeling and positively determining is impossible, just so this [[[“awareness is concealed”]]] is said because of the mind’s mode of self-experiencing. In that way, all awareness is pervaded by being concealed. However, some awarenesses, from the point of view of eliminating proliferations, are both “object” (*don*) and “supreme” (*dam pa*) and so there is a distinction of definition.⁹⁷ [[[The nature of an awareness that is a reasoned insight and concealed are of the same nature; therefore, ultimate and concealed are of the same nature. However, ultimate truth and concealed are not of the same nature because it would be contradictory for real and unreal to be of the same nature.]]]

1.2 Explaining the statements of the teachers

12[1] [[[Refuting others]]]

12[1].i [[[Stating (others’ view)]]]

[[[If one analyzes Gangs pa’s assertion, the definitions of the two truths are presented as follows in a way that would not align with the conventions of the text of the commentary.]]]

Consider the following explanation of the definitions in terms of “what accords with appearances and what accords with reasoning”:

- [[[As for “what accords with appearances”]]] the objects of the eye, and so forth, that are engaged without analysis, from cowherds to the omniscient.
- [[[As for “what accords with reasoning”]]] the objects of inference that eliminates actual proliferations or the object in the gnosis that does not conceive ever. [[[When speaking of what accords with reasoning]]] “Object of reasoning” amounts to merely the elimination of existence [[[the object of negation]]]. [[[In the case of reasoning]]]⁹⁸ there is nothing attested as an object.⁹⁹

⁹⁶ Text reads *blo ni kun rdzob yin par ’dod* for *blo ni kun rdzob yin par brjod*.

⁹⁷ Namely, a distinction between the definitions of “ultimate” and “ultimate truth.” rGya dmar pa here plays with the etymology of *don dam pa*, “ultimate,” taking apart the two words, *don* and *dam pa*, to show that some awarenesses qualify as *don dam pa*. The annotation will show, however, that those awarenesses that qualify as ultimate still are not ultimate truths.

⁹⁸ The annotation reads only *rigs pa*, which might suggest that “reasoning” itself does not exist as an object.

⁹⁹ This concords with the position ascribed to Gangs pa in Chap. III, 2.1.

12[1].ii [[[Negating others' view]]]

We accept the definition of the ultimate in that way [[[according to Gangs pa]]], providing the answer that explains [[[as above]]] that the mere elimination is attested as an object that accords with reasoning but negating that (an object) is not attested.¹⁰⁰

[[[Negation:]]]

As for what is concealed being “what accords with appearances,” [[[the (proposed) definition of concealed]]] that is, being an object of a non-analytical awareness, while this would amount to being non-erroneous, if non-erroneous without specification was the definition, it would be the case that ‘produced’ could be the definition of ‘impermanent.’ Thus, in the case of appearance without specification and being concealed, which are distinct [[[intension]]] exclusion properties [[[they are (distinct exclusion properties), and (in the case of) distinct exclusion properties]]], it is not suitable for one to define the other because [[[if it was suitable, as in the case of ‘produced’ and ‘impermanent’]]] absurdities would ensue.

[[[Furthermore,]]] If pleasure, form, and so forth were established as appearing [[[without specification]]] without analysis [[[and negating their veracity were not necessary]]], then the meaning of concealed [[[namely, appearance without specification]]] would already be established; [[[one thinks, “What would be the need for a valid cognition that ascertains being concealed, which consists in negating veracity?”]]] therefore, an argument establishing that they are concealed, via negating their being ultimate, would be pointless. [[[One thinks, “Without negating veracity, appearance without specification is not established as what it is.”]]]

Objection: “Non-analytical appearance” or “appearance without specification” is indeed established [[[without negating veracity]]].

Answer: What is the meaning of “non-analytical”? If it is “in the perspective of erroneous,” [[[because an object cannot be established as erroneous without negating veracity]]] then you accept the invalidation of veracity. Similarly, if by merely saying “appearance without specification” you negate veracity, we agree. [[[Insofar as you agree with the thought of tradition, we offer no refutation.]]]

12[2] [[[Setting forth Jo btsun's system]]]

[[[Furthermore, completing (the discussion),]]] The teachers, spiritual friends, [[[Khyung and Lotsawa]]] state as follows [[[setting forth Jo btsun pa's system]]]: the definition of ultimate truth surpasses even object of knowledge without specification; it is not an object of awareness in any way, such as ‘empty’ or ‘not empty.’ Thus, (Śāntideva) said “The ultimate is not in the scope of awareness.”

¹⁰⁰ This is clarified in section III, 221 and 2.2.2, in which rGya dmar ba presents his own position and refutes the position ascribed to Gangs pa.

12[3] [[[Refuting objections to our system]]]

[a]

Objection: It is contradictory to set forth object of knowledge without specification as the basis of division (of the two truths)¹⁰¹ and [[[when explaining the meaning of the terms]]]¹⁰² it is contradictory for reasoning to be ultimate and its object to be veridical.

[a.1] Answer: It is said [[[by dGe bshes pa]]] that this is like, for instance, the following: The inferential cognition (of fire from smoke) merely conceives as [[[the external]]] fire itself something superimposed [[[that is, a concept appearing to awareness itself]]] through the force of the ripening of tendencies of conceptual cognitions as fire and so forth from the beginningless past. However, it [[[inferential cognition]]] does not take as its object a particular [[[that is, an external fire]]]. This [[[that a particular is not the object of inferential cognition]]] is what is asserted when analyzing by introspection.¹⁰³ And yet it is asserted that, from the perspective of the [[[the inferential]]] awareness itself, [[[that is, since (this very cognition) wrongly assumes that it realizes a particular, based on that]]] it has a particular for its object. [[[Similarly, from the perspective of reasoning, the absence of nature is taken as an object. However, when analyzing by introspection (of the reasoning cognition), the ultimate is not set forth as an object once reasoning has completed the invalidation of existence, the negandum. Therefore, there is no contradiction in setting forth a division of objects of cognition based on this perspective.]]]

Objection [[[it is said]]]: By way of saying

When one sets forth (the ultimate) as an object from the perspective of what is asserted within a reasoning consciousness [[[that is, (reasoning) claiming “I take the absence of nature as an object”]]], then when analyzing by introspection [[[the setting forth of (the ultimate) as an object]]] reasoning [[[merely]]] invalidates existence [[[the negandum]]] but there is no such thing called “the ultimate” that is an epistemic object [[[of an inferential cognition]]], that would become an object [[[of a reasoning consciousness]]].

[[[ultimate truth as]]] a division of objects of cognition from that perspective [[[based on a reasoning consciousness thinking “I realize the absence of nature”]]] is [[[merely]]] set forth. [[[But you say that when analyzing by introspection, the ultimate is not set forth as an object]]]. [[[However,]]] When introspection searches, it applies the convention “ultimate” to what is beyond all cognition and expression [[[what is beyond the object of that reasoning consciousness]]] and in doing so introspection takes as its object what is beyond all cognition and expression [[[that is, the ultimate]]]; (the latter) [[[ultimate truth]]] becomes its [[[that is, introspection’s]]] object of cognition.

¹⁰¹ Section I, “The basis of division”.

¹⁰² Section III, “The meaning of the term”.

¹⁰³ *rang bzhin sems dpa'* seems to be a variant of *rang bzhin sems pa*, the latter translating *svabhāvacintā*. The term could refer to a cognizer, rather than a cognition, and perhaps stems in part from the term, *byang chub sems dpa'*. *svabhāvacintā* occurs in *PV* III.350 and *PVin* I, p.37.7. Phya pa chos kyi seng ge’s commentary to the latter cites the expression as *rang bzhin sems dpa'*.

Answer: Do the words [[[that express]]], “a particular is not a referent of words,” express [[[that is, refer to]]] that [[[a particular]]] which is not a referent? [[[It someone answers, “This (statement) merely negates a particular being a referent of words; it is not the case that a particular is taken as an object by these words,” then by parallel reasoning,]]] Thus, that [[[introspection]]] merely negates (ultimate truth) being attested as an object of cognition [[[of a reasoning consciousness]]] but [[[introspection]]] does not set forth (ultimate truth) as an object. In so far as it is merely a matter of negating what is established, the Conqueror’s sons remain silent.

[a.2] [[[The refutation:]]] The analysis has (five parts): the example is not established; since the object is not fitting, one cannot dispel objections; there are errors regarding the very reasoning that dispels objections; the meaning that is explained [[[here]]] contradicts other statements [[[stated in epistemological treatises]]]; and, this is invalidated by previously explained reasoning.

[a.2].1. The example is not established:

[[[Thus, the meaning of saying “inferential cognition is both valid cognition and not valid cognition” is as follows:]]]

- Since there is no experience of the particular fire, and so forth, (the latter) [[[a particular fire]]] does not come to be the apprehended object [[[of the inferential cognition]]]. Since it conceives of what is superimposed [[[that is, the apprehended object]]] as being external [[[that is, as a particular fire]]], (it) [[[inferential cognition]]] is erroneous concerning what is apprehended.
- On the other hand, [[[inferential cognition is a valid cognition with regard to the intentional object, thus]]] it cannot be negated that the particular is the very epistemic object that is conceived because the two valid cognitions are similar in having the definition of valid cognition with regard to the intentional object [[[because these both have epistemic objects from their respective perspectives]]].

[[[Objection: If one thinks that this is because it is not the case that inference takes a particular as an object when introspectively analyzing,]]] we ask

Is this introspective awareness valid cognition or not?

- If it is, how could inference whose object is negated by that be posited as valid cognition? [[[That is, since (inference’s object is negated by that, how could it be posited as valid cognition?)]]] It could be (valid cognition) in relation to what is apprehended [[[if it is posited (in this way, inference would be) erroneous]]] or from the perspective of what is conceived [[[in relation to (what is conceived, inference) is posited as valid cognition because it has an epistemic object]]]. If it is [[[still]]] posited [[[to be valid cognition]]] from the latter perspective, even though introspection negates the intensional object, [[[the absurd consequence would ensue that]]] all awareness would be valid cognition.
- If it [[[that is, introspection]]] is not valid cognition, inference is established to just have a particular as its object [[[because what is not valid cognition cannot negate the epistemic object of the valid cognition, inferential cognition]]].

Therefore, the example is not established.

[a.2].2. Since the object is not fitting, one cannot dispel objections

[[[2. The object is not fitting]]] Similarly, if introspection negates [[[the intensional object,]]] the elimination that is mistakenly assumed [[[and conceived]]] to be realized from the perspective of what is asserted within a reasoning consciousness, then it is not proper for reasoning [[[consciousness]]] to be valid cognition [[[because the intensional object has been negated by another awareness (namely, introspection) and]]] there is no occasion for inference being a valid cognition regarding something [[[that is, the apprehended object]]] other than the object of thought [[[that is, the intensional object]]].

Objection: It is in regards to the mere elimination of existence [[[that inference is valid cognition]]].

Answer: Just that being the epistemic object has been explained many times already [[[for example, (1) the mere non-establishment of existence is the definition of non-existence and (2) the awareness that understands in that way is understanding non-existence]]].¹⁰⁴

Therefore [[[for this very reason]]], one cannot dispel objections.

[a.2].3. There are errors regarding the very reasoning that dispels objections

[[[3.]]] [[[It would follow that this introspection would be the valid cognition that delineates the non-concordant ultimate and teaching the invalidation of asserting that]]] [[[With regard to the latter, there are four parts: devoid of proliferations would be established to be the epistemic object of introspection; it would become an affirming awareness; there would be infinite regress; and it would not be necessary.]]]

[a.2.3.1] [[[It would follow that this introspection would be the valid cognition that delineates the non-concordant ultimate]]]

Otherwise, if one conceives of (the ultimate) as the object of a reasoning consciousness, by saying that introspection surpasses even the object of that [[[that is, of a reasoning consciousness]]], this very introspection that eliminates all proliferations would be [[[it must be]]] the reasoning that delineates the non-concordant ultimate.

Objection: Why not?

Answer: Because (of the following):

[a.2.3.2] [[[Teaching the invalidation of asserting that]]]

[a.2.3.2.1] [[[Devoid of proliferations would be established to be the epistemic object of introspection]]]

¹⁰⁴ See sections III.1.1 and III.1.2.

- The very elimination of all proliferations, such as the object of reasoning and so forth [[[by way of saying that (introspection) surpasses even (the object of reasoning)]]], would be established as the epistemic object of that [[[that is, of this introspection]]]. Alternatively [[[while that might be the case]]],

[a.2.3.2.2] [[[It would become an affirming awareness]]]

- If [[[it were the case]]] that [[[introspection]]] negates what reasoning eliminatively takes as its object, it becomes an affirming awareness [[[because the negative of a negation is an affirmative]]].

(In the event that introspection has no object at all,)

- If it [[[that is, introspection]]] does not posit any object, it would not be suitable to be a consciousness [[[because it would not have an object of cognition]]] or a valid cognition [[[because it would not have an epistemic object]]].

It is also because (of the following):

[a.2.3.2.3] [[[There would be infinite regress]]]

- It is not suitable for just this [[[that is, introspection]]] to be perception [[[for those of limited vision]]] and so it must be inference. In so far as this is the case, what is wrongly assumed to be the object of that [[[[introspection (which is an inference)]]]] would need to be negated by another introspection, which is (also) an inferential cognition. Therefore, there would be no end [[[in so far as each wrongly assumed object of introspection would need to be negated by a second introspection (thinking), “it does not exist in that way”]]].

[a.2.3.2.4] [[[It is not be necessary]]]

- If it [[[that is, the mistakenly assumed) object of introspection]]] does not need [[[to be negated by a second (introspection)]]], then the object of the former [[[that is, of a reasoning consciousness]]] also does not need (to be negated) [[[by introspection]]], due to parity of reasoning.

Objection: The object that is mistakenly assumed by this very introspection is included among the objects of inference in general [[[since it is claimed that (introspection) is beyond all objects of inference in general]]]; therefore, there is no need for another negation [[[apart from (the negation) we set forth; therefore, it is not the case that there is no end]]].

Answer: If one applies the negation having included its own [[[that is, introspection’s]]] epistemic object [[[that is, the object that is mistakenly assumed]]] among the objects negated [[[that is, (thinking), “I am beyond even my own object”]]], it is possible that the

unlearned could hold that it is not an inference, or that it is not the case that it is a valid cognition that has an epistemic object for its object, or that all statements are false [[[there is a contradiction between previous and subsequent words]]]. It is not possible that valid cognition itself could apply [[[that it could apply when its own object is negated]]]. All valid cognitions invalidate an opposing object [[[because they have an exclusion for their objects]]]; it is not possible that they would negate their own object.

[a.2].4. The meaning that is explained [[[here]]] contradicts other statements [[[stated in epistemological treatises]]]

[[[4.]]] Additionally, it would be contradictory [[[for yourself, Jo btsun,]]] with the statements:

- [[[In the context of the *Pramāṇaviniścaya* determining the number of valid cognitions]]] The fact that a consciousness that is different from perception and inference does not have an epistemic object serves as a valid reason to negate (that consciousness) being valid cognition.
- Since it is correct that the epistemic object of non-apprehension is a non-entity, reasoning that negates a cause, and so forth, does not invalidate [[[a non-entity being an epistemic object]]].¹⁰⁵

[[[These statements are contradictory with (your asserting) here a valid cognition that lacks an epistemic object and not stating that a non-entity can be an epistemic object of a valid cognition.]]]

Objection: [[[Even without an epistemic object,]]] The mere non-establishment of existence is taken conventionally to be the epistemic object.

Answer: If (a consciousness) lacking an actual epistemic object were a valid cognition, then language and comparison would be also [[[valid cognition in so far as they lack actual epistemic objects]]].

Objection: Since it [[[that is, a reasoning consciousness]]] mistakenly assumes that it cognizes an absence, it has an epistemic object.

Answer: [[[Does (what is mistakenly assumed) have or not have (the definition of epistemic object)?]]] If what is mistakenly assumed has the definition of epistemic object in that way, devoid of proliferations [[[such as the wrong assumption of realizing the absence of nature]]] also would be established as an epistemic object. If you accept that [[[to be valid cognition]], through taking it as an epistemic object from the perspective of thought even though it does not have the definition (of epistemic object), then it would also be the case for language and comparison [[[that they are valid cognition]]].

Therefore, we do not subscribe to positing a consciousness that does not cognize an object of cognition or a valid cognition that does not realize an object. [[[Since the

¹⁰⁵ This second statement suggests Dharmottara's position that a non-entity serves as the probandum of a non-apprehension inference.

Lotsawa accepts that not being a valid cognition and not having an epistemic object are synonyms, this other case also is not valid cognition.]]]

[a.2].5. This is invalidated by previously explained reasoning

[[[5.]]] Additionally, if devoid of proliferations is not an object of awareness, it would be difficult for you to provide an answer to the following:

We accept that the mere invalidation of existence, the negandum, is an object
[[[that is]]] not established to exist [[[to be an (existent) entity]]];
Even though it is not an object of an affirmation, it is found to be an object of an
awareness that negates [[["it does not exist"]]].¹⁰⁶

2. Definition of the respective kinds of conventional

2.1 The definition of the respective kinds that we assert

{v. 13: no division pertaining to the ultimate apart from concordant and actual; otherwise only division is between ultimate and conventional.}
{v. 14: division of kun rdzob into incorrect and correct, matching the ultimate that the substantialists classify as dependent and perfected; the substantialist's parikalpita is for the Madhyamaka a twofold subcategory of incorrect conventional}
{v. 15: rGya adopts as a definition of correct/incorrect conventionality causal efficiency/absence of causal efficiency pertaining to the appearance of an object of cognition that is not true. The teacher(s) explain differently/elsewhere.}

2.2 Analyzing the assertions of the teachers

2.2.1 The teachers' views

{According to lo tsa ba, these three are to refute mistaken conceptions:
SDV: the perfected void of the imputational is ultimate
PV/PVin: what is causally efficient is ultimate
Sthiramati: dependent origination is the ultimate.
Jo btsun explained that one does not need all of the three, nor the additional fourth of previous scholars 'common appearance'}

2.2.2 Refutation of that

{'Causally efficient' or 'dependently arisen' define, respectively, 'entity' and 'produced', but not 'correct conventional' – the latter is a different concept.

{Jo btsun:) If the definition 'non-erroneous' (mi 'khrul), dngos po=yang dag kun rdzob. No need for proof of kun rdzob refuting don dam bden.}
{Gangs pa:) Any of the three can define it, stating the three is an illustration (upalakṣaṇa) (i.e., not a definition, lakṣaṇa); the old Tibetans' definition 'commonly appearing' also.

¹⁰⁶ See verse III.2 at the close of chapter III, cited again in section IV.2.1.

Agreement on the definiens ‘implicative negation of imputation’ which amounts to causal activity void when analyzed’. The other two definiens define something else. (Lo tsa ba) ‘void of imputation’ indicates the nature of correct conventional (but does not define it); it lacks substantial establishment as definiens, and would be an over-extensive definiens (applying also to hallucination, etc.) Therefore, ‘void of imputation’ is only indicative, and the respective definitions are to be found in SDV 12ab.}
